

FOR E W O R D

The present issue of Annual Season and Crop Report for the agricultural year 1994-95 is yet another addition in the series of such reports, purported to summarise the scenario of agricultural conditions of H.P. State, with statistical data on important variables viz ; precipitation, Land-use-profile, production-structure, source-wise net/gross irrigated area, cropping pattern, productivity structure, output profile, farm harvest price, and agricultural wages. Besides, the report also incorporates data on livestock and agricultural census.

The report can be distinctly divided into two parts *i.e.* (I) Summary Tables giving a quinquennial bird's eye-view of broad state-aggregates, and (II) the Detailed Tables delineating a comprehensive picture of district-wise data on the aforesaid variables for the year under review *i.e.* for the year 1994-95. In brief, the report has been prepared to serve as a ready compendium on basic data on agricultural sector.

I would like to place on record my appreciation for the collective team-work done by the Deputy Commissioners, Sub-Divisional Officers (Civil), District Revenue Officers, Tehsildars, Naib-Tehsildars, Field Kanungos and the patwaris, and, infact, the entire revenue agency whose inputs have gone into the making of various field reports from which the various statistics have been culled out for presentation in the present State report. My appreciation is also towards the Statistical Assistants of this Directorate who are posted in the Deputy Commissioner's Offices and are dealing with the collection and compilation of various data incorporated in the report. I would like to make a special mention of the valuable contribution made by Sh. H. S. Thakur, Additional Director, Land Records, who, despite his numerous preoccupations, kept a constant tab on the field work and helped in bringing this report to its present shape.

At the State headquarter, the report was compiled by Shri Ram Rattan Gupta, Assistant Research Officer, under the overall guidance and supervision of Dr. Birpal Singh, and Shri R. R. Sandhu, the Director of Agricultural Census, and the Statistician, respectively. Dr. Singh and Shri Sandhu made commendable efforts in statistical analysis of the data.

I hope the report would prove useful for various plan formulations of the Government as well as constitute an important source of secondary data for research workers.

N. C. SOOD I.A.S.,
Director of Land Records,
Himachal Pradesh, Shimla-171009.

INTRODUCTION

The Annual season and crop Report-1994-95 is a ready compendium of various agricultural statistics, attempting to exhibit the Land-use pattern, district-wise, as well as corresponding data on production structure of agriculture viz source-wise and crop-wise irrigated area, cropping profile, productivity of various crops, crop-wise total output, farm-harvest prices, agricultural wages and a summary picture of Agricultural & Livestock census. The report commences with a quinquennial survey of foregoing agricultural statistics i.e. from the year 1990-91 to 1994-95, followed by a Comprehensive district-wise and crop-wise data for the year under review. The report presents all the statistical data in metric units i.e. area in hectares and production in metric tonnes.

PHYSICAL FEATURES :

Nestled in the Western Himalayas, the State of Himachal Pradesh present a kaleidoscopic view of undulating terrain varying within altitudes from 350 metres to 6975 metres above the mean sea level. Its beautiful flora and fauna and its valley and hills present a fascinating panorama for the tourists making the state an ideal focal point on the itineary of the vistors. Geographically, it is bordered by the state of Jammu and Kashmir in the North, Punjab in the West and South West, and Tibet in the East touching international border. Configuration-wise , it is situated between 30-22'-44" to 33-12'-44" north latitude and 75-22'-44" to 79-04'-20" East Longitude, thereby giving rise to agro-climatic conditions suited for raising horticultural crops.

CONSTITUTIONAL BACKDROP AND ADMINILTRATIVE SET-UP

Constitutionally, the state initially came into existence as a Part-C state of the India union on April 15, 1948 as a result of the merger of 30 Punjab and Shimla Hill states. At that time the state comprised of only four districts, namely, Chamba, Mahasu, Mandi and Sirmour with a total area of 27,168 Sq. Kms. However, as the years rolled by, the political complexion of the state continued to change . In 1954, the state of Kot Kehloor, i.e., the present district of Bilaspur joined the mainstream thereby raising to total geographical area of the state to 28,237 Sq. Kms. Further, in may 1960, a new border district of Kinnaur was carved out of the then Mahasu district comprising in erstwhile Chini Tehsil of Mahasu district and certain parts of tehsil Rampur. In due course, in the wake of re-organisation of states in November, 1966, the geographical area of the state virtually doubled when four hill districts, namely, Kangra, Kullu, Lahaul-Spiti and Shimla of Punjab were also intergrated with the Prades. January 25, 1971, was a red-letter day in the history of the Prades when the status of full fledged statehood was conferred upon us on September, 1, 1972. The district Kangra was trifurcated on September, 1972 giving rise to two more new district of Una and Hamarpur. Again the district Mahasu was reorganised in the form of two new district of Shimla and Solan. thus, at present, the state of Himachal Pradesh is spread over an area of

55,673 Sq. Kms., according to the survey conducted by the surveyor General of India. Presently the state is composed of 12 districts, namely, Bilaspur, Chamba, Hamirpur, Kangra, Kinnaur, Kullu, Lahaul-Spiti, Mandi, Shimla, Sirmour, Solan, and Una. These districts are further organised into three commissioners *viz* Shimla, Mandi and Kangra. For purposes of day-to-day administration, the district of Kinnaur, Shimla, Solan & Sirmour fall into Shimla Division; whereas the district of Lahaul-Spiti, Kullu, Mandi, Bilaspur and Hamirpur comprise Mandi Division, the remaining three districts of Kangra, Chamba and Una fall in the Kangra Division. To recapitulate in brief, the state, administratively, has three Divisions, 45 Sub-Divisions, 12 districts, 67 tehsils and 26 Sub-tehsils. The state headquarters are located at Shimla which has a unique place on the national as well as international map due to its pictureque panorama and historicity.

CLIMATE AND AGRO-CLIMATIC ZONES:

The typical geographical local of the state makes it what it is in terms of climate and varying agro-climatic zones which give it a distinct advantage in terms of horticultural crops and off-season vegetables and hold the key to the fast changing socio-economic profile of the state. It might be in order to recall that geography of a state has a material bearing on its growth potential by determining its land-forms, the quantum and spread of precipitation, land-use and crop-wise profile, and, above all, its socio-economic cultural complexion. Five major rivers criss cross the state *viz* the river Beas traversing through Kullu, Mandi and Kangra; the river Satlej meandering through Kinnaur, Shimla and Bilaspur; districts the river Ravi passing through Chamba; the river Yamuna having its major tributaries in district Shimla and Sirmour; and finally, the fifth river Chenab flowing through the district Lahaul-Spiti and parts of Chamba district.

The terrain varies as one moves from South to North & from West to East. Due to its varying altitudes, the climate also varies from mild to cold. From the stand-point of production potential, the state can be geographically divided into the following categories.

(I) Valley upto an elevation of 1000 Metres:

These are very fertile and can be subjected to intensive cultivation.

(II) Low Hills:

These have an altitude of 1000 metres to 2000 metres above the mean-sea level and are ideal for horticulture.

(III) High Hills :—

These lie between 2,000 metres and 3,500 metres above the mean-sea-level. This zone is good for raising forests. Because of altitude and severe winter conditions these hills are sparsely populated.

ALPINE ZONE:

These lie above 3500 meters above mean-sea-level and abound in pasture lands.

THE LAND OF PERPETUAL SNOWS:

These lie above the perpetual snow line and are without any vegetation.

PRECIPITATION AND ITS SPREAD:—

The district-wise land use profile of the state is preceded by detailed season-wise information on rainfall for the year 1994-95. It goes without saying that precipitation is the most critical in put not only for the germination of a crop but also for its subsequent growth and maturity. The quantum of rainfall and its proper distribution is the most crucial input for a state like Himachal Pradesh where the development of irrigation infrastructure is severely restricted by its geography. The extent of assured irrigation during the year under review is 17.5 per cent with the obvious inference that 82.5 per cent of the total cropped area still continues to be rainfed. Even when we talk of assured irrigation, one has to bear in mind the following dominant variables *viz*:

I. Nearly 92 per cent of the net irrigated area is fed by 'Kuhls' which are water-channels led from the sources of water to the fields. Since these 'Kuhls' are often prone to damage due to severe weather conditions, a proper maintenance of these water channels calls for regular and timely repairs year after year.

II. What actually determines the production possibility crops is not only the quantum of rainfall but also its time-liness and proper distribution. The distribution of rainfall is indicated by the number of rainy-days in a district.

The data embodied in Table-I of the Detailed Tables of the report summarises the position in respect of the foregoing Variables.

LAND USE CLASSIFICATION:

Land is the most predominant endowment in an agricultural economy and a proper delineation of available land into standard classifications can help the planners in evolving a suitable and scientific policy for crop-production. The Table-II (Detailed Tables) of the present report exhibits the land-use profile of the state. As can be seen, the total geographical area of the state, as per the Surveyor General of India, is 55,673 Sq.Kms. In contrast, the total Reported Area *i.e.* the area on the regular records of the patwaris is 34,024 Sq. Kms. which in other words means that 21,649 sq. kms. of area is still unsurveyed. In terms of percentage, the extent of unsurveyed area is 39 per cent, a major part of which areas fall into the district of Kinnaur, Kullu, Lahaul-Spiti, while slight variations are discernible in the districts of Hamirpur, Solan, Sirmour and Shimla. As can be seen from the tabular data, the total Reporting Area, which is the

sum-total of the nine fold land -uses can be broadly seen in terms of three larger aggregates/or classifications viz.—

I. Forests and Area not available for cultivation (41%), (II) other uncultivated land excluding fallow lands (40%), other fallow lands (2%) and the Net Area Sown (17 per cent).

The Accompanying Table-I depicts to break-up of the reporting area during the year 1994-95 vis-a-vis. the preceding year 1993-94.

However, from the point of view of detailed analysis , the nine-fold classifications are enumerated and defined as follow :—

I. FORESTS:

All actually forested area on the lands classed or administered as forest, covered by any legal enactment dealing with forests, whether state owned or private, and whether wooded or maintained as potential forest land.

All such aforementioned lands fall under the category of forests. However, if any portion of private forest land is not actually wooded but is put to some other agricultural uses, then that portion of land shall be included under the appropriate heading of cultivated or uncultivated land. However, this will not apply to state owned forests.

A glance at the quinquennial summary data of area under 'forest' reveals that area under this category has been steadily increasing from 10.39 Lacs in 1990-91 to 10.49 Lacs in 1994-95. It constituted 31 percent of the reporting area in the year under review.

TABLE I.—Classification of Reporting year 1993-94 & 1994-95

Category	1994-95		1993-94	
	Area	%	Area	%
1	2	3	4	5
1. Forests	10,49,039	31	10,43,178	31
2. Barren & Unculturable land	14,93,88	41	1,47,782	4
3. Land put to non-agricultural uses	1,98,669	6	2,01,744	6
4. Culturable Waste-land	1,18,126	4	1,19,647	4
5. Permanent Pastures and others grazing lands	11,93,602	35	11,98,300	35
6. Misc. tree crops and groves not included in net area sown	48,634	1	46,242	1

	1	2	3
7. Other fallow lands	20,695	1	21,108
8. Current fallows	55,938	1	50,232
9. Net Area sown	5,68,338	17	5,71,744
(1 to 9) Total Reporting area by Village papers.	34,02,429	100	33,99,887
Total cropped Area	9,67,990		9,75,231
Area sown more than once	3,09,652	70	4,03,487
			71

II. BARREN AND UNCULTURABLE LANDS :

This category of land-use classification includes all barren and unculturable lands like mountains, deserts, e.c. which can not be brought under cultivation except at a very high cost. Such lands can be lie in isolated blocks or may lie within cultivated holdings.

Percentage-wise, it is 4 per cent of the reporting area for the year under review and is stationary incomparison to preceding i.e. 1993-94. In absolute terms it is 1493 Sq. Kms.

III. LAND PUT TO NON-AGRICULTURAL USES:

As the nomenclature of the land-use classification it self suggests, this category includes all lands which are put to uses other than agriculture viz land occupied by buildings, roads, railways., rivers, canals, e.c.

During the year under review the total area under this category accounts for 6 per cent of the total Reported Area and is 1.99 Lac Sq. Km. in absolute terms.

IV. CULTURABLE WASTE LANDS:

This category includes all lands which are available for cultivation but have not been taken up for cultivation during the last five years or more in succession due to one reason or the other such lands may be either fallow or may be covered with shrubs or jungles which are not put to any use. Such lands may be assessed or unassessed and may lie in isolated blocks or within cultivated holdings. Land once cultivated but not cultivated for the last five years or more in succession shall also be included under the category at the end of the five years. In the terminology of the Department of Revenue such lands are also called Banjar Kadim.

During the year under review this category of land accounted for 4 per cent of the total Reporting Area and has not shown any increase over the preceding year.

FALLOW LAND OTHER THAN CURRENT FALLOWS :

This comprises all land which were once taken up for cultivation but are now temporarily out of cultivation for a period of not less than one year but not exceeding five years. The reasons for keeping such lands fallow may be one of the following:—

- I. Poverty of the cultivators.
- II. Inadequate supply of water.
- III. Unfavourable weather conditions.
- IV. Silting of canals and rivers.
- V. Unremunerative nature of farming.

Such lands are also classed as 'Banjar Jadid' in the parlance of the revenue Deptt. The extent of such lands during the year 1994-95 is one per cent.

CURRENT FALLOWS:

This classification is defined as those areas which were kept fallow/unsown during the year 1994-95 i.e. Kharif 1994 and Rabi 1995. For example, if any seedling area is not cropped again in the same year then that should be treated as current fallows. This area under current fallows forms a component of cultivated area as aggregation of 'Net Area Sown' and 'current fallows' represents the cultivated area.

It would be seen from the foregoing definitions on land classification that if a piece of land has remained unsown or fallow for a period of one year, then it will be treated as current fallows; but if the period exceeds one years but is still below the ceiling of five years, then it will be treated as Banjar Jadid or other Fallow lands. And, if such period has reached the ceiling of five years and above, then it would be classed as Banjar Kadim or culturable waste lands.

LAND UNDER MISC. TREE CROPS AND GROVES NOT INCLUDED IN NET AREA SOWN:

This denotes all such cultivable land which is not included in net Area sown but is put to some agricultural uses. For example, land under casurina trees, thatching grasses, bamboo bushes other groves for fuel etc. which are not included in Net Area sown shall be included under this category. The extent of such lands is one per cent during the year under review.

PERMANENT PASTURES AND OTHER GRAZING LAND:

This includes all grazing lands whether those are permanent pastures or not. The village common lands and grazing lands with in forested areas shall also be included under this head. The land under this category forms the largest chunk of the reporting area and the extent of such lands during the year 1994-95 is 35 per cent.

NET AREA SOWN :

This represents the net area sown to crops and orchards, counting 'area sown more than once' only once in the same year. In absolute terms, the area during the year 1994-95 is 5,71,744 hectares as against 5,68,338 hectares during the preceding year. The extent of such land is 17 per cent of the reporting area.

AREA SOWN MORE THAN ONCE :

This represents the area on which crops are raised more than once during an agricultural year and is obtained by deducting the 'Not area sown' from the 'Total cropped Area'. The extent of such area is 11.9 per cent of the reporting area during the year 1994-95 as against 11.7 per cent during the year 1993-94.

TOTAL CROPPED AREA :

This represents the sum-total of all areas sown to crops during the year under review, treating 'area sown more than once' separately for each crop. This total cropped Area during 1994-95 is 9.68 lacs hectares as against 9.75 lacs hectares during the preceding years 1993-94.

INTENSITY OF CROPPING:

The intensity of cropping is the index of the extent of intensive cultivation and is normally expressed as a ratio of Gross Area sown to Net Area sown. For the sake of better comparison and convenience, it is expressed as a percentage and can be expressed as follows:—

$$\frac{R - \text{Gross cropped Area}}{\text{Net Area sown}} \times 100$$

Owing to the peculiar hilly terrain, the scope for horizontal cultivation is very limited and the only way to augment total cropped area is to raise more than one crop per unit of land during a given year.

As can be seen from the tabular data embodied in Table-II, the aforesaid ratio for the state as a whole for the year 1994-95 is 170.3. The district-wise position in the descending order is Hamirpur (195.5), Sirmour (188.8), Bilaspur (186.8), Solan (168.1), Kullu (162.6), Chamba (151.4), Shimla (143.3), Kinnaur (122.1), Kangra (180.4), Mandi (173.3), and Una (170.4) and Lahaul-Spiti (104.4).

It is apparent from the district-wise statement that cropping intensity is the highest in the case of Hamirpur district i.e. 195.5 and it is the lowest of Tribal districts i.e. Lahaul-Spiti (104.4). It is the lowest in the case of predominantly single-cropped areas. It is also self-evident that the ratio is obviously greater in low-lying areas as compared to hilly areas because the low-lying areas can be subjected to intensive cultivation. The ratio is determined by a number of variables like terrain, irrigation facilities, agro-climatic conditions, etc.

TABLE II—INTENSITY OF CROPPING IN EACH DISTRICT OF HIMACHAL PRADESH

Sr. No.	Name of the Districts	1994-95			1993-94		
		Net area sown	Total cropped area	Intensity	Net area sown	Total cropped area	Intensity %
1	2	3	4	5	6	7	8
1. Bilaspur	32,441	60,609	186.8	31,908	60,621	190.0	
2. Chamba	42,353	64,138	151.4	42,572	65,768	154.5	
3. Hamirpur	36,858	72,067	195.5	37,309	71,720	192.2	
4. Kangra	1,18,898	2,14,480	180.4	1,19,684	2,18,213	182.3	
5. Kinnaur	7,607	9,285	122.1	7,523	9,553	127.1	
6. Kullu	36,121	58,737	162.6	36,534	57,192	156.5	
7. Lahaul & Spiti	3,147	3,285	104.4	3,128	3,280	104.8	
8. Mandi	94,813	1,64,334	173.3	95,005	1,64,159	172.8	
9. Shimla	73,288	1,05,029	143.3	73,275	1,10,853	151.3	
10. Sirmour	41,418	78,220	188.8	42,348	78,396	185.1	
11. Solan	39,248	65,996	168.1	40,355	67,167	166.4	
12. Una	42,146	71,810	170.4	42,113	68,309	162.2	
Total (H.P. State)	5,68,338	9,67,990	170.3	5,71,744	9,75,231	171.1	

The Table—III, which immediately follows Table-II above, gives a quinquennial survey of cropping Intensity since 1990-91.

TABLE III—CROPPING INTENSITY DURING THE LAST FIVE YEARS

INTENSITY OF CROPPING

Sl. No.	Name of the district	1990-91 1991-92 1992-93 1993-94 1994-95					
		1	2	3	4	5	6
1. Biaspur	184.1	190.5	193.1	190.0	186.8		
2. Chamba	155.5	153.5	132.7	154.5	151.4		
3. Hamirpur	197.5	195.1	197.3	192.3	195.5		
4. Kangra	178.8	181.2	182.9	182.3	180.4		
5. Kinnaur	120.3	120.2	123.0	127.1	122.1		
6. Kullu	164.4	176.2	176.2	156.5	162.6		
7. Lahaul-Spiti	102.4	106.6	104.3	104.8	104.4		
8. Mandi	171.1	171.8	173.3	172.8	173.3		
9. Shimla	146.3	142.6	137.9	131.3	143.3		
10. Sirmour	181.1	186.3	195.8	185.1	188.8		
11. Solan	170.6	166.6	172.2	166.4	168.1		
12. Una	152.7	168.6	169.3	162.3	170.4		
H.P. State	..	168.7	170.9	169.9	171.1	170.3	

IRRIGATION INTENSITY :

On the lines of cropping intensity the ratio of Irrigation intensity is represented as follows:—

$$\frac{\text{R} = \text{Gross Irrigated Area}}{\text{Net Irrigated Area}} \times 100$$

For the state as a whole, it is 177.0 as against 171.9 during the preceding year. The increase in percentage is obviously attributable to increase in net irrigated area, which, in turn, is on account of strengthening of irrigation facilities in the state. As regards district-wise position for the year 1994-95, it is the highest in the case of district Kangra i.e. 202.9 and is the lowest in the case of district Kullu i.e. 100.0. The position in respect of other districts in the descending order is Bilaspur (195.7), Shimla, (193.0) Mandi (192.7) Sirmour (185.9) Hamirpur (178.0), Solan (177.5), Kinnaur (124.5), Chamba (107.4), Lahaul-Spiti (104.4), and Una (146.4).

TABLE IV—IRRIGATION INTENSITY DISTRICT WISE FOR THE YEAR 1993-94 & 1994-95

Sl. No.	District	1994-95				1993-94			
		Net irrigated area	Gross irrigated area	Intensity %	Net irrigated area	Gross irrigated area	Intensity %		
1	2	3	4	5	6	7	8		
1. Bilaspur		2,909	5,692	195.7	2,909	5,458	187.6		
2. Chamba		6,162	6,618	107.4	6,113	6,113	100.0		
3. Hamirpur		1,766	3,144	178.0	1,766	3,196	181.0

H.P. State	..	1,00,454	1,77,838	177.0	99,646	1,71,354	171.9		

CROPPING PATTERN :

Cropping profile in brief, deals with the types of crops grown in a geographical region and it indicates the extent of area grown to each crop as a percentage to total cropped area. Defined thus, a change in cropping pattern would indicate a change in the proportionate area under different crops. The accompanying Table-V delineates the crop wise proportionate distribution of total cropped area and total output for the year 1994-95 as against the preceding year 1993-94. An analytical study of the tabular data for 1994-95 would yield the following observations:—

(i) Food crops clearly predominate the agricultural scenario, area wise as well as production-wise. In terms of area, the total area under food crops is 96.3 per cent, accounting for 99.3 per cent of the total output.

(ii) The observation leads to the obvious inference that the total non-food crops in the state account for just 3.7 per cent of the total cropped area . The non-food crops account for just 0.7 per cent of the total output.

(iii) Even in respect of food crops it is the cereals that predominate i.e. accounting for as high as 87.0 per cent of the total cropped area and 89.6 per cent of the total output of 15.49 Lacs This clearly shows that due to peculiar geographical conditions, the scope for horizontal expansion is severly limited and what ever cultivable margin is available is exhaustively used for raising cereal crops for self consumption.

(iv) the extent of area under pulses is very limited it being just 3.9 per cent during the year 1994-95 accounting for just one per cent of the total output of the state.

(v) The only shift that is clearly discernible in cropping is in respect of fruit crops. The total area under fruits and vegetables is 8.5 per cent of the total cropped area. Thus there is a clear tilt towards horticultural crops.

(vi) Although the total output i.e. 15.49 lacs metric tonnes is higher as compared to the total output of 13.99 lacs for the year 1993-94. However, it is worth observing that the output of fruit crops & other short-duration crops is still not being objectively documented which would be possible only when the present on-going Centrally sponsored scheme on crop-estimation survey on fruits and vegetables is suitably strengthened so that a comprehensive survey on fruits & vegetables gets under-way & objective estimates on production subsequently formulated. The instructions on the subject as enshrined in the updated H.P. Land Records Manual, 1992 are repeatedly being brought to notice of the field agency for the purpose.

(vii) The state has made a pulpable headway in respect of some cash crops like apple, potato, ginger, hops, kuh, off-season vegetables, etc. But, again, the scope for raising these crops is very limited in view of the cropping profile being predominantly geared to raising food crops.

TABLE—V
CROP WISE PERCENTAGE DISTRIBUTION OF AREA AND OUT-PUT FOR THE YEARS 1993-94 AND 1994-95

*Area in Hectares.
Output in Metres.*

Sr. No.	Crop	1994-95				1993-94				Percentage Change	
		Area	%	Output	%	Area	%	Output	%	Area	Output
1	2	3	4	5	6	7	8	9	10	11	12
1.	Maize	3,08,476	31.9	6,32,917	40.8	3,04,927	32.5	6,43,192	46.1	+1.2	-1.6

12

PRODUCTIVITY OF CROPS :

Productivity of yield/ha. is a major indicator of the production possibilities of an economy. Two types of methodologies are currently in vogue for determining the yield/ha. of crops in the State. The yield in respect of the four major cereal crops viz maize, paddy, wheat & barley is estimated on the basis of objective methodology i.e on the basis of random sampling method with the Kamungo circle as the lowest stratum. These experiments are jointly executed by the Department of Revenue and the Department of Agriculture. Whereas field work is mainly done by the revenue functionaries the actual conduct of crop-cutting experiments & supervision thereof done by the field staff of Department of Agriculture.

The productivity in respect of all other crops is estimated on the basis of traditional or Annawari method, of treating Normal yield as equivalent of sixteen annas.

The yield per ha. in respect of four major crops for the year 1994-95 *Via-a-Via* 1993-94 is tabulated as follows :—

Sl. No.	Name of the crop	Yield per ha A. (In Kg.)	
		1993-94	1994-95
1	2	3	4
I.	Maize	2129	2052
II.	Paddy	1238	1351
III.	Wheat	1103	1564
IV.	Barley	1202	1330

FARM HARVEST PRICES :

The tabular data adduced below gives a comparative picture of farm harvest prices during the year 1994-95 *Via-a-Via* 1993-94. The farm harvest prices indicate the wholesale price per qtl. of the produce at the farm-site which exclude the transport and other cartage costs. It is defined as the average wholesale price at the village site during the specified harvest period and is arrived at on the basis of prevalent prices at the pre-selected centres :—

Sl. No.	Crop	Farm Harvest Price (In Rs./Qtl.)	
		1993-94	1994-95
1	2	3	4
1.	Rice	539.00	542.25
2.	Maize	342.00	397.42

1	2	3	4
3.	Wheat	389.00	440.35
4.	Barbey	365.00	413.82
5.	Gram	1310.00	1339.58
6.	Sugarcane (Gur/Jaggery)	1008.00	1050.00
7.	Groundnut	1650.00	1927.00
8.	Rape-Mustard	1466.00	1534.79
9.	Tobacco	685.00	847.00

AGRICULTURE WAGES :

The Tabular data appended below gives a comparative picture of agricultural wages for the skilled and unskilled workers in the state. The Table-VII incorporated in the report indicates the district-wise and month-wise position of agricultural wages. The data given below summarises the position in respect of the state:—

Sl. No.	Category of labour	Wages (In Rs./Day)	
		1993-94	1994-95
1	2	3	4
1.	Carpenter	59.36	65.03
2.	Blacksmiths	50.06	54.80
3.	Cobblers	48.81	55.55
4.	Field Labour	34.78	39.97
5.	Other Agri. Labour	31.30	34.79
6.	Herdsmen	30.49	35.76

The general increase in the daily wage rates of skilled and unskilled categories both is partly attributable to higher cost of living and partly due to scarcity of labour. Even a glance at the various statistical tables incorporated in the report would indicate that due to increasing area under horticultural crops, there are heartening shifts in area and production profile of the state agricultural economy, conclusively indicating that the economy is on the way to a better economic change.

SUMMARY TABLES—concl.

(Based on 1992 Census)

H—Number of Livestock, Poultry and Agricultural Machinery and Implements

	1993-94	1994-95
Cattle:		
Males over 3 years—		
Breeding bulls	68,205	68,205
Other males over 3 years	7,86,061	7,86,061
Total cattle (Male) ..	<u>8,54,266</u>	<u>8,54,266</u>
Female over 3 years—		
Breeding cows	3,84,821	3,84,821
Other cows over 3 years	3,54,605	3,54,605
Young stock	5,71,342	5,71,342
Total cattle ..	<u>21,65,034</u>	<u>21,65,034</u>
Buffaloes:		
Males over 3 years—		
Breeding bulls	5,250	5,250
Other males over 3 years	10,831	10,831
Females over 3 years—		
Breeding Buffaloes	2,99,909	2,99,909
Other Buffaloes over 3 years	2,72,060	2,72,060
Young stock	1,15,492	1,15,492
Total Buffaloes ..	<u>7,03,542</u>	<u>7,03,542</u>
Total Sheep ..	<u>10,78,940</u>	<u>10,78,940</u>
Total Goats ..	<u>11,18,094</u>	<u>11,18,094</u>
Total Yaks ..	<u>5,697</u>	<u>5,657</u>
Horses and Ponies:		
Males over 3 years	7,602	7,602
Females over 3 years	6,453	6,453
Young stock	N.A.	N.A.
Total Horses and Ponies ..	<u>14,055</u>	<u>14,055</u>
Mules	16,390	16,390
Donkey	7,722	7,722
Camels	367	367
Pigs	67	67
Others	—	—
Total livestock ..	<u>51,16,933</u>	<u>51,16,933</u>
Poultry:		
Fowls	7,21,849	7,21,849
Ducks	73	73
Others	674	674
Total Poultry ..	<u>7,22,596</u>	<u>7,22,596</u>
Agricultural Machinery and Implements:		
Plough	7,10,349	7,10,349
Carts	1,128	1,128
Sugarcane Crushers	1,878	1,878
Tractors	2,565	2,565
Oil Engines	1,299	1,299
Electric Pumps (Diesel Engine Pump sets)	1,222	1,222
Thresher	2,692	2,692

TABLE No. VIII

Number of Livestock, Poultry, Agricultural Machinery and implements in each District of
Himachal Pradesh according to last census as on 15-10-1992
(As per 1992 Cattle Census)

Sub-Schedule I—Live Stock (Cross Bred Cattle) :

Male over 2½ Yrs.	1. Used for breeding only	2,095
	2. Used for work only	52,764
	3. Used both for work and breeding	3,216
	4. Used for neither breeding nor work	844
	5. Total Male over 2½ year	58,919
Female over 2½ Yrs.	6. In Milk	83,591
	7. Dry	28,331
	8. Not yet calved	10,384
	9. Others	2,120
	10. Total Female over 2½ Yrs.	1,24,426
Young Stock Under 1 Yr.	11. Male	14,360
	12. Female	40,848
	13. Total	55,208
1 to 2½ Yrs.	14. Male	11,540
	15. Female	30,300
	16. Total	41,840
Total Male Cross Bred.	17.	84,819
Total Female Cross Bred.	18.	1,95,574
Total Cross Bred Cattle.	19.	2,80,393
Indigenous Cattle Male over 3 Yrs.	20. Used for breeding only	14,368
	21. Used for work only	7,26,467
	22. Used for both work and breeding	48,526
	23. Used for neither work nor breeding	5,986
	24. Total male over 3 years	7,95,347
Female over 3 years	25. In Milk	3,01,230
	26. Dry	2,34,527
	27. Not yet calved	65,824
	28. Others	13,419
	29. Total Female	6,15,000
Young Stock under 1 Yr.	30. Male	82,277
	31. Female	1,45,952
	32. Total	2,28,229
1 to 3 Yrs.	33. Male	1,13,600
	34. Female	1,32,465
	35. Total	2,46,065
Total Male	36.	9,91,224
Total Female	37.	8,93,417
Total Indigenous Cattle	38.	18,84,641
Total Cattle (Cross Breed & Indigenous).	39.	21,65,034
B—Buffaloes		
Male over 3 years	40. Used for breeding only	4,423
	41. Used for work only	2,319
	42. Used both for work and breeding	827
	43. Used for neither breeding nor work	184
	44. Total male	7,753
Female over 3 years	45. In Milk	2,99,909
	46. Dry	1,36,485
	47. Not yet calved	31,604
	48. Others	6,481
	49. Total Female	4,74,472

TABLE VIII—contd.

Young Stock under 1 year	50. Male	17,169
