Submitted to HIPA

Land acquisition for Mandi
International Greenfield Airport,
Himachal Pradesh India

Foreword

This Social Impact Assessment (SIA) report has been prepared by SR Asia in accordance with the Right to Fair Compensation and Transparency in Land Acquisition, Rehabilitation and Resettlement Act, 2013 and the Himachal Pradesh Social Impact Assessment (HPSIA) Rules, 2015. The research team visited Project Affected Families (PAFs) in Balh tehsil of district Mandi to collect data on socio-economic status, their displacement status, local ecology, culture and socio-economic profile, important inputs for the affected area, revenue and land. Extensive consultations were held with officials of the Reforms Department, Tourism Department and Project Implementation Unit (PIU).

We thank Dy. Commissioner Mandi, and Government officials for timely support and cooperation in providing data and information to carry out the field survey.

We are also grateful to project affected families and local representatives for their time and consideration. We appreciate the efforts made by all the participants of this study and would like to thank them for their support. I would like to thank Mr. Ajay Kumar Singh working in the organization and the members of the SIA team of the organization for providing important support in completing this study.

February 2023

SIA REPORT

Land acquisition for Mandi
International Greenfield Airport,
Himachal Pradesh India

Executive summary

1. Background:

Mandi Airport is a proposed greenfield airport to be built at Nagchala in Mandi district of the Indian state of Himachal Pradesh. This airport will be built on a total of 232.12 hectares. The Airports Authority of India (AAI) has given its approval for the construction of the airport after a site visit in May 2018. In August 2019, the Chief Minister of Himachal Pradesh requested the Fifteenth Finance Commission for a special purpose grant of Rs 2,000 crore for the construction of the airport. AAI completed the disturbance delineation surface survey for selection of project site in August 2019 for operation of wide body aircraft. Ministry of Civil Aviation has given in-principal approval for execution of the project with the help of AAI in October 2019. In January 2020 AAI has signed a memorandum. A Memorandum of Understanding (MoU) has been signed with the Government of Himachal Pradesh for the construction and operation of the airport through a joint venture company. The airport will have one unidirectional runway, initially suitable for handling aircraft up to ATR 72. E. CW has been appointed as the project consultant and tenders were issued for environmental impact assessment of the project after site visits in July 2020.

1.1 Need for new airport in Mandi district:

Presently there are three airports in the state of Himachal Pradesh at Jubbarhatti in Shimla district, Gaggal in Kangra district and Bhuntar in Kullu district but none of the existing airports are operational due to operational constraints and geographical location to handle international flights. Not suitable. Himachal Pradesh is primarily a hilly state and unavailability of other modes of transport makes roads the only means of inter-state and intra-state transport. In addition, long travel time and safety are major issues in mountainous areas, especially during inclement weather conditions, so air connectivity offers a significant advantage in terms of time savings and safety.

1.2 Project Site:

The site identified for the proposed new greenfield airport at Nagchala is located about 10 km from Mandi town on NH 154. The land of seven villages (DPF Dyoda, Jarlu, Dhaban, Syanh, Tawan,

Kummi and Chatru) of Balh tehsil of Mandi district has been selected for the construction of the airport.

The detailed project report (DPR) shared by tourism department was in draft form without a proposed rehabilitation and resettlement plan as were required to share with project affected families and people and derive an objective social impact mitigation plan.

1.4 Advantages of the site as an airport construction site:

The site has the following advantages as a construction site for the new greenfield airport in Mandi district:

- The site is about 10 km from Mandi town and very close to National Highway-154
- Most of the construction site is flat.
- The plot is about 5000 meters long and about 1000 meters wide.
- The plot is in almost direct connectivity with Chandigarh-Kullu-Manali Highway no. 154. Due to which the infrastructure related to the airport can be developed in a planned manner in future.
- There is ample scope for development of commercial infrastructure towards Mandi town.

- The airport is suitable for all infrastructure for operational purposes which can be integrated with the city infrastructure in future.
- The site is outside the local flying areas of the Indian Air Force.

1.5 Alternative Location for the Project:

During the public consultation to the residents of the affected area and the members of the Panchayat, they shared that the Balh land in the proposed area is very fertile for cash crop production and the Airport construction will greatly impact multi cash crop production in the area. Some people have also suggested Jahu as the alternate location for the Airport project and Jahu is at about 35 km from Balh, about 46 km from Mandi, about 42 km from Hamirpur. aSIA team members visited to Jahu along with Lekhpal and Kanungo of the concerned area and found that barren land is available which means as compared to Balh, there will be far less displacement and rehabilitation of people. However due technical and feasibility study may be carried out to consider the same as an alternative to the proposed site if required.

2.1 Need for Social Impact Studies:

The construction of Mandi airport is an important project of the state government. Land is required in the Mandi district for the construction of the airport. This includes both government and private land. Private landowners whose land will be acquired by the District Administration under the available rules and transferred to the Department of Tourism and Civil Aviation, Government of Himachal Pradesh. In this connection it is to be mentioned that in compliance with the Right to Fair Compensation and Transparency in Land Acquisition, Rehabilitation and Resettlement Act 2013, i.e., Himachal Pradesh Social Impact Assessment Rules 2015 (HPSIA Rules, 2015), it is mandatory to conduct a social impact assessment study to acquire any land. Accordingly, the Social Impact Assessment study submitted by the Social Impact Assessment Unit, (HIPA), Government of Himachal Pradesh, through SR Asia (an SIA agency).

2.2 Objectives of the study:

The purpose of the presented social impact assessment study is to identify the effects on the social, economic, and cultural status of the families affected by the acquisition of land for the construction of the airport and suggest ways to minimize these effects.

2.3 Study Methodology:

The land required from respective villagers were 5.28 Hectare, 20.40 Hectare, 8.81 Hectare, 25.21 Hectare, 35.70 Hectare, 78.25 Hectare of DPF Dyoda, Jarlu, Dhaban, Syanh, Tawan, Kummi and Chatru villages of Balh Tehsil of Mandi district and the total land affected by the acquisition is 232.12 ha is for Greenfield International Airport Project. Out of seven suitable villages, one village DPF Dyoda Forest Department and Jarlu Village Municipality Council are non-inhabited. Efforts were made by the SIA team of SR Asia organization to meet 3448 affected landowners of all the villages from December 30, 2022, to January 22, 2023, for continuous house-to-house interviews and those landowners who are outside the village They were interviewed through telephone or through family members. In this regard, it would also be necessary to mention that out of 3715 landowners who were contacted for interview, 1227 landowners were those who were interviewed in another village, their interview schedule was not filled again or there were some landowners whose names were not in the list. There were times, so they were interviewed once or there were some landowners who belonged to joint family who had land in the name of other family members also, so their interview schedule was not filled. In this way, a total of 1757 landowners could be

interviewed. But 741 landowners could not be interviewed due to being outside the village and for various other reasons.

2.4 Tools of Study:

A combination of both qualitative and quantitative methods was used for the study. The following instruments were used in carrying out the present Social Impact Assessment study.

- 1.Desk review
- 2.Site visit
- 3.Village Level Proforma
- 4.Schedule for affected families,
- 5.Participatory Rural Appraisal (PRA)
- 6.Instructive context for group discussion and Data Analysis and Report Writing

3. Land Assessment

3.1 Land use:

In the affected seven villages of tehsil Balh, 2.50 percent of the total geographical area is under forests, 1.33 percent area is barren and uncultivable land, 17.15 percent area is used other than agriculture, 3.66 percent area is pasture, 2.18 percent area is under other trees. And under shrubs, fallow land in 0.31 percent area and net sown in 72.87 percent area.

3.2 Details of desired land etc. under the project:

A total of 232.12 hectares of land is being affected under the airport in 7 villages of Balh tehsil of district Mandi, out of which 26.31 hectares (11.34 percent) of land is government, rest (88.67 percent) 205.81 hectares of land belongs to private farmers.

3.3 Displaced population from the project and details of affected houses/built structures:

Out of seven villages of Balh tehsil affected, two villages have no population. The population and assets of the remaining five villages are being affected, about 2862 people are being displaced by the project, while about 589 residential houses (mostly residential houses are pucca and two to three storey and about 986 other built structures (cow sheds, washrooms, shops, government buildings, places of worship, schools, hospitals, and cremation grounds etc.) are affected under the alignment. Maximum 32.42 percent of Kummi and minimum 1.33 percent of Dhaban village are among the affected displaced population. While 39.05 percent of the residential houses are of Kummi and 1.53 percent of Dhaban village.

4. Social and economic profile of the affected villages:

1. All the affected villages are located at 1 to 6 km from the tehsil. There are bus stations in village Syanh and Tawan, while the distance of bus station from all other villages is 0.5 to 3 kms. And the distance of all the villages from block headquarter is from 3 kms to 10 kms.
2. Males constitute 50.03 percent and female's 49.97 percent of the total population in all the villages. Scheduled caste population is 70.69 percent of the total population.
3. Most of the families in the affected villages are of Hindu community followed by Muslim and Sikh families. Most of the families in the affected Hindu community belong to Scheduled Caste, followed by General Caste and Other Backward Castes.
4. Availability of facilities of Commercial/Rural Banks, Co-operative Banks, Co-operative Purchase-Sale/Credit Society, Daily Market, Weekly Market, Vegetable/Galla Mandi, Government Cheap Cow Shop, Fertilizer-Seed Godown and Agricultural Machinery Store are within the distance of 5 km.
5. Temples and crematoriums are in all the affected villages. Other social, religious, and cultural institutions/places such as public toilet for men, public toilet for women, graveyard, mosque, gurudwara, playground and fair place are within 5 km distance from the village. The distance of the church from the affected villages is 14 to 18 kms.
6. Panchayat buildings are in all the affected villages, while post offices are in Dhaban and Kummi villages. The distance of the post office from the rest of the villages is one kilometer. are up to Apart from Dhaban and Chatru, there are offices of political parties in the rest of the villages. There is no police station in any of the affected villages.
7. Primary schools are available in all the affected villages. Upper primary school and high school are available in all the villages except Chatru village, while inter colleges are available in Syanh, Tawan and Kummi. Degree college and ITI are not available in any village.
8. Anganwadi centers are available in all the affected villages. Whereas except Dhaban and Chatru villages, A.N.M. The center is located. Health sub-centers are in the affected Kummi village. Remaining health services are available in all the villages within 5 km.
9. Veterinary services are available in all the villages except the affected Chatru village. While the availability of veterinary services is one km from Chatru village. distance.

10. All the affected inhabited villages are electrified. 100 percent of the inhabited villages have electricity connections for household lights/fans and agricultural work and industrial connections for industrial work.
11. Piped water supply, submersible, India mark handpump and well are the main source of drinking water in 100% affected villages respectively.
12. Government and private tube wells/pumpsets, wells and rivers are available as means of irrigation in all the villages. There is no availability of canal as a source of irrigation in any of the affected villages.
13. Women self-help groups have been formed in eight percent of the affected villages. While male self-help groups are not formed in any village.
14. Flour mill, grocery store, goat rearing, poultry rearing, tent house, and mutton/chicken/fish shop units are available in all the affected villages.
15. It was told by the representatives and villagers of all the affected villages that there is no dowry system, ban on widow remarriage, ban on higher education of girls and no ban on family planning in their villages. While superstition, Tantric action and Panchayati decisions etc. are prevalent in general form.
16. Cattle, fish, goats, and mules are available in 100 percent affected villages.
17. Availability of green fodder for animals in 100% affected villages is sufficient.
18. Wheat, barley, peas, and mustard are cultivated in 100 percent villages in rabi crops. In kharif crops, paddy and jowar are sown in 100 percent villages. While no crops are sown in Zayd's crops. Regarding commercial crops, vegetables (tomato, cabbage, brinjal, okra, cucumber etc.) and potatoes are sown in 100 percent of the inhabited villages. The main crops of the affected villages are vegetables (tomato, cabbage, brinjal, okra, cucumber etc.). Vegetable cultivation is abundant in these villages. Which is the main source of income of the farmers of the village.
19. Public assets located on village society/government land proposed for acquisition are affected in 100% inhabited villages such as approach roads, irrigation drains, private tube wells, temples, houses, trees, and shops.
20. According to the Pradhans/Panchayat members of the affected villages, the reasons for non-voluntarily giving land for the project by the landowners are that the circle rate in 100 percent of the villages is much less than the market value, the land is very fertile and the land is very expensive, 83.33 The fear of unemployment in percent of the villages and the problem of flood in

the village due to the project and in 66.67 percent of the villages, the loss of many shareholders of the land and the problem of migration from the village etc. were cited as the reasons.

21. In relation to the negative effects of the project, the cultivable land will be reduced by 100 percent, the problem of migration from the village, the loss of the main / link roads of the village by 83.33 percent, the problem of water logging in the village, the decrease in vegetable production, the irrigation Shortage in resources, increase in pollution by 50.00 percent and difficulty in movement of farmers to the fields, etc. were told as negative multiple effects.

22. While 100 per cent development of village/area, increase in transport facilities, development of health-related resources, time will be saved in travel, tourism will increase and rate of other lands will increase, while employment will increase by 83.33 per cent. New opportunities will be available, educational resources will be developed and are very useful from strategic point of view and business sources will increase by 66.67 percent, migration from villages to cities will reduce and the living conditions of the residents will improve by 50 percent etc. along with many and positive multiple benefits.

5. Socio-economic and cultural impact:

5.1 Characteristics of the affected families:

The landowners whose name is repeated in the list or because of being in another village or because of belonging to the same family, have been interviewed only once. Based on this, the social characteristics of the affected families are being described in the next paragraphs.

1. Out of the total interviewed affected landowners, 68.87 percent were men and 31.13 percent are women.
2. In the educational qualification of the interviewed affected landowners, 13.03 percent are illiterate while 28.51 percent are literate. In other educational qualifications, 25.38 per cent had high school, 12.35 per cent intermediate, 9.62 per cent less than high school, 6.77 per cent graduate and 4.33 per cent postgraduate.
3. Among the landowners interviewed, 99.94 percent are Hindu and 0.06 percent are Muslim.
4. Out of the landowners interviewed, 79.04 percent belong to Scheduled Caste and 13.32 percent belong to General Caste. While 7.29 percent of the other backward classes are landowners.
5. The main occupation of 56 percent of the landowners interviewed is agriculture on their own land, 14 percent job, 12 percent agricultural and non-agricultural labor, 4 percent shop/trade and 14 percent other business.

6. Of the interviewed landowners, 36 percent have an income of three to five lakhs, 23.62 percent less than 1.5 lakhs, 19.69 percent five lakhs to 10 lakhs, 19.07 percent 1.5 lakhs to three lakhs and 1.54 percent 10 lakhs. From more income.
7. Among the landowners, 64.71 percent are nuclear families, 26.81 percent are middle families and 6.37 percent are joint families.
8. According to the source of irrigation of the affected landowners, 30.51 percent of the interviewed landowners irrigate through private tube wells/pump sets and the remaining 69.49 percent irrigate the farmers through rented tube wells/pump sets.
9. Out of the interviewed landowners, 49.57 percent have availability of livestock while 50.43 percent do not have availability of livestock.
10. In the type of house of the interviewed affected landowners, 50.20 percent of the landowners have multi-storey houses, 45.08 percent have one floor pucca houses, 2.56 percent mixed houses and 2.16 percent kutcha houses.
11. Electricity connection is available with all the affected landowners.
12. Among the interviewed affected landowners, 100% drinking water source is through pipeline, 14.23% through summer pipe and 4.04% through India Mark two handpumps.
13. Toilets were constructed in 99.93 percent of the landowners interviewed. While only 0.17 percent of the landowners did not have toilets constructed.
14. Only 97.61 per cent of the affected landowners interviewed had separate Kitchens are available, remaining 2.39 percent houses do not have separate kitchens. The 15 interviewed landowners were also asked about the fuel used by them for cooking. In its description, gas is used by 97.61 percent of landowners and wood/dung cakes by 21.40 percent of landowners in multi-state for cooking food.
16. The regularity of the facilities available in the Anganwadi center is 100%.
17. According to the affected landowners, in the description of the distance to be covered for various types of medical treatment, 92.32 percent landowners were given 5 km. 5 kms to 7.68 percent landowners. More distance must be covered.
18. In the details of participation in different types of festivals/events by the members of the families of the affected landowners interviewed, 24.76 to 40.52 percent of the total landowners participate in social, economic, national festivals/events, religious fairs, religious events, and

political events. There is high participation and normal participation level by 60.22 to 72.11 percent. While the level of participation is very high from 1.31 to 7.0 percent.

19. Information regarding the construction of airport near/in the middle of the village was found to be 100% affected by all landowners.
20. In the details of the area of land to be acquired for the airport project of the affected landowners, 85.26 percent of the landowners are proposed to be acquired up to 0.20-hectare, 10.53 percent from 0.21 to 0.40 hectare and 4.21 percent more than 0.40 hectare. Is.
21. In the detailed description of the crops currently being sown in the land being acquired from the landowners, 15 per cent are sowing cereals, 13 per cent are oilseeds and 82 per cent are commercial crops. While 4 percent other or no crop is sown on the land.
22. In the description of the type of land being acquired from the landowners, 55.49 per cent land is fertile, 37.73 per cent land normal and 25.84 per cent land very fertile.
23. In the details of annual income from crop production in the land proposed for acquisition, the income of 69 percent of the interviewed landowners is less than one lakh, 21.62 percent from one lakh to three lakh, 7.85 percent from three lakh to five lakhs. And 1.31 percent have an income of more than five lakhs.
24. Out of the interviewed landowners, 70.40 per cent landowners said good, 23.16 per cent landowners said bad and 6.43 per cent landowners said they could not say about the construction of the international airport project.
25. Out of the interviewed landowners, 68.64 percent of the landowners agreed to give land for the construction of the airport, while 23.45 percent landowners did not agree to acquire land for the construction of the international airport project. 7.91 percent of the landowners replied that they cannot ask for the land.
26. In the description of properties affected by acquisition of land for the construction of the International Airport project, 11.50 percent of the landowners interviewed have housing on their land, 21.06 percent have business on their land, 33.01 percent have both (residence and business) and 34.43 percent of the landowners are affected only by land acquisition.
27. The reasons for the disagreement of the interviewed affected landowners to give land for the construction of the international airport project, in the multi-answer statement, the circle rate is less than the market value by 100 percent, the land is highly fertile by 97.44 percent,

livelihood by 77.08 percent. loss, excessive value of land by 63.12 percent, fear of unemployment by 68.92 percent, migration from village by 52.08 percent, excessive attachment to land by 46.78 percent, multiple shareholders of land by 43.54 percent, ancestral land by 41.66 percent and 38.42 per cent cited the project as the reason for the problem of flood in the village etc.

28. Information was also obtained from the affected landowners that on what terms they would agree to give the land. Whose circle rate is equal to the market value by 100 percent in multi-answer details, 86.80 percent equal to land acquisition and quality land should be given at some other place, 69.61 percent job in government or semi-government department, 60.16 percent alternative employment Physical/financial assistance should be given to start, 54.92 percent after solving the problem of displacement, 49.16 percent on getting compensation on time and 44.28 percent after disposal of the share etc.
29. According to the interviewed landowners, the topic of adverse impact due to the construction of the airport was discussed, which in multiple statements would reduce the agriculture land by 38 percent, increase pollution by 15 percent, prevent children from going to school by 11 percent. 28 per cent farmers have said about the problem in going to their fields and 55 per cent farmers have said that there is no special ill-effect.
30. According to the interviewed landowners, in the description of the benefits of the construction of the airport, there will be rapid development of the area by 100 percent and increase in the value of other lands, increase in traffic facility by 99.66 percent, by 95.33 percent Tourism will increase, new employment opportunities will be available by 89.19 percent, travel time will be saved by 75.30 percent, means of self-employment will increase by 66.25 percent land owners, migration from villages to cities will reduce by 64.26 percent, by 82.87 percent There will be improvement in living conditions and 56.18 percent have told the benefits of being very useful from the strategic point of view by the landowners.

6. Need for collective discussion and consultation:

Infrastructure and development projects that effect demographic shifts of PAPs, livestock, and livelihoods, it provides policy makers with an adequate and socio-economically sound framework on execution as per the Rehabilitation and Resettlement (R&R) Act. In this aspect, public consultation refers to a two-way exchange of information or collaborative discussion between the project proponent and the community. It is an essential component of every development

undertaking. These dialogues are critical for the project to be inclusive and responsive to the local community and social ecology. It brings together all stakeholders, policy-making bodies and multiple agencies to discuss and address critical concerns to achieve a mutually satisfactory outcome. It is a medium to engage various stakeholders, especially the affected communities, by providing them a platform to express their opinions, concerns and apprehensions about issues and activities affecting them, either positively or negatively, thus Enables them to enhance the decision-making process. Not only does it facilitate the identification of some emotional impact and effective planning, but it also helps in communication of information, reduction of fear and development of rapport with communities, which are essential for smooth projects like this. Implementation is paramount. The primary objective of project-affected people's participation is to increase public awareness and acceptance of the development activity or project by mitigating perceived environmental consequences through education and open dialogue. In addition, public feedback can be used to enhance the design of the project.

6.1 Group discussion with five inhabited villages of the Project Affected Area: - Tawan, Dhaban, Synah, Kummi and Chatru (Because Jarlu village is non-inhabited, and one village land area belongs to Forest Department.)

Anticipated Project Impact on Individual Landowners: The proposed project site is established mostly on private land and community land. Community land has been given to the members of the community for various activities.

The land to be acquired for the proposed project site will subsequently affect the general property resources of the area. However, once the project is implemented, there will be better access to urban areas and availability of economic activities.

- a. It is observed that since the proposed project is likely to affect a lot of PAFs/households, most of the PAFs reside within the alignment of the acquisition. In addition, they also expressed apprehension regarding the agricultural land acquired by the government for this project as a large part (for some families, their entire land) comes under the proposed project area which needs to be destroyed and compensated for the same. is required.
- b. However, they feared losing the farmland and the annual revenue from it. Hence their demand was that land of equal size (area), and quality should be allotted in their tehsil area to ensure regular revenue generation.

c. Most of the respondents believed that their house falls under the project site, which would affect a large section of PAFs, as they would be rendered homeless unless they have a pucca house to live in. However, some respondents were of the view that their abode would not be dismantled unless the abode is replaced by another allotted land area with the facility. However, in the absence of land exchange, such PAPs will be adversely affected.

7. Cost and Benefit Analysis:

7.1 Assessment of Public Purpose from The Project:

It may also be established that a public objective would certainly be served by acquiring the private land and thus carrying out the construction of the project. The project, if completed, will improve connectivity, and provide smooth, fast, and safe commuting and transport services to commuters. If the project is delayed, it will increase the overall cost of the project, affecting both the Himachal Pradesh government and its residents. If the project is stalled, it will not only result in loss of money but will also result in wastage of entire manpower and resources spent so far on the project. Therefore, the social costs and benefits of the proposed land acquisition have been assessed assuming that there will be no change in

7.2 Eligibility Criteria (Matrix):

PAFs should be entitled to the following six types of compensation and support packages:

- Compensation for loss of land, crops/trees at their replacement cost.
- Compensation for structures (Residential/Commercial) if any and other immovable properties on their replacement cost.
- Assistance against loss of business/wage income and assistance in income generation.
- For physically displaced families who do not have any houses, alternate housing or cash compensation in lieu of houses.
- There should be provision for assistance for relocation and resettlement site (if required).
- Community resources/facilities should be rebuilt.

The results of the cost and benefit analysis are summarized in.

Cost		Benefit	
Economic and infrastructure	Plan Earth building electrification safety device	Economic benefits	Income from passenger fares, increase in land value, business opportunities, livelihood options, Income from employment, developed market etc.
Operating cost	Energy Labor Material annual maintenance	Social benefits	Tight transport, access to new places, saving travel time, transport reliability, improve security. road savings basic infrastructure
Other and Environmental Costs	Accident, air pollution, noise pollution and cultural invasion	Cultural benefits	Promotion of business culture, Comfort and Ease Travel
Present value of total cost		Present value of net profit	

8. Social Impact Management Plan:

The identified proposed measures for the welfare of the project affected people as per the PWD Rules, 2015 are as follows: -

1. Social impact assessment should be done before the land acquisition process.
2. More monetary benefits before acquisition process and list of displaced family, land ownership and infrastructure, commercial structure, list of landless people in affected area, list of PAPs belonging to SC/ST, handicapped list in affected area List of landless agricultural laborers in the affected area, list of movable/immovable property in the affected area should be prepared.
3. The operation of the project should be carried out in compliance with all applicable laws, policies, measures taken to minimize damages such as appropriate compensation or development of sources of livelihood and resources, national and state legislations.
4. As far as possible efforts should be made to create proper resources to avoid social side effects in the operation of the project. Where this is not possible, the duration, intensity and spread of the social impact/repercussion should be minimized. Also, efforts should be made to restore those impacts which cannot be fully mitigated (for example, agricultural land, sources of livelihood, quality of life of individuals, etc.).

5. The priority of the project should be in accordance with the welfare and livelihood of the affected persons and families while determining suitable construction method schedule and other measures to minimize the damage.
6. The construction and operation of the airport may be directly related to the social impact or there may be an impact on the natural environment and the local economy in the form of execution of project activities etc. While assessing all such direct and indirect impacts accurately and transparently, there is a need to adopt mitigation measures to reduce them.
7. In the project, special attention needs to be given to weak/vulnerable persons and families, such as landless and tenant farmers who depend on agricultural labor for their livelihood. Such persons and families should be able to take decisions, consult and unable to participate in the discussions. Along with this, they remain ignorant about new means of livelihood and work opportunities under the project. Those affected who do not have proper land ownership or land registration should also get proper compensation, although they have been living in the affected area for many years.
8. The legal rights and interests of all those individuals, groups and communities who are affected by the project should be taken care of in the project. In this way, all those whose land, crop and other assets are in the layout of the airport and such other persons whose comfort, standard of living and other security cover etc. have been affected are to be included in it.
9. Individuals, groups, and communities in the project as stakeholders of the project shall have the right to express their rationality, interests and views in the subjects related to the project. The right to dissent of the affected people should be ensured and duly considered.
10. R&R package including livelihood plan, gender plan, education plan etc. for people affected by acquisition should be mandatory and time bound.
11. Timeline of payment to be fixed or paid before rehabilitation and resettlement No one should be displaced before rehabilitation and resettlement plan.
12. All displaced PAFs should be given at least three prior notices, and a reasonable time of 9-12 months should be given for smooth rehabilitation and resettlement in the new area of their choice with utmost care for their livestock.

13. There should be proper compensation for social impacts due to displacement/rehabilitation, economic, psychological, ecological, mental inclusiveness.
- 14.. Transparency and participatory approach should be followed for the acquisition and subsequent rehabilitation process.
15. Utmost care should be taken to prevent misuse of land.
16. There should be an option of lease for the landless people.
17. Institutional Mechanism- National/State Monitoring Authority/Commissioner R&R /Administrator should be set up for settlement of disputes.

10. Recommendations:

The SIA team has collected data from the field through interaction with PAF, observation and other technical methods and has proposed some recommendations from observation of these concerns, which are as follows:

1. The compensation amount for land acquisition should be four times the market value of the land/circle rate (as applicable) in rural areas and two times the market value of the land in urban areas as per the first schedule of the RPST Act, 2013.
2. Assets located in the acquired land such as building, shop, tube well/boring, trees, plants, crops, water source etc. should be compensated by proper valuation from the competent organization or through negotiation with the affected families.
3. Affected families will partially lose agricultural land, resulting in loss of crop productivity.
4. Generally all farmers are ready to give land. If their problems are redressed according to them or according to the PWD Act, 2013.
5. Whose business will be destroyed by acquisition. They should be rehabilitated and rehabilitated as per the Land Act 2013, and they should get enough money every month to earn their livelihood until their business becomes operational.
6. The affected landowners should be compensated as per the Social Impact Management Plan (SIMP) described in this study and the provisions of RFCTLARR Act 2013.
7. The families whose land and houses will be destroyed in the acquisition. Such families should be rehabilitated and rehabilitated before acquisition as per rules within a radius of about 15 kms.

8. Community, social and government properties which are affected by the acquisition and will affect the villagers partially or completely. After assessing those assets, rehabilitation and resettlement should be done as per the rules before the project work starts.

9. The findings of the study also reveal that the proposed project will affect the livelihood and socio-economic condition of the affected families.

Chapter-1

1.1 Background:

The Himachal Pradesh government first proposed an international greenfield airport at Balh Valley in Mandi district to the Union Ministry of Civil Aviation in 2008. Since the existing airports in the state at Kullu, Kangra and Shimla were capable of handling only small aircraft, the state government desired to develop a larger airport at Sunder Nagar that could cater to larger aircraft operations and acquired land for the project. offered to provide.

Mandi Airport is a proposed greenfield airport to be built at Nagchala in Mandi district of the Indian state of Himachal Pradesh. This airport will be built on a total of 232.12 hectares. The Airports Authority of India (AAI) has given its approval for the construction of the airport after a site visit in May 2018. In August 2019, the Chief Minister of Himachal Pradesh requested the Fifteenth Finance Commission for a special purpose grant of Rs 2,000 crore for the construction

of the airport. AAI completed the disturbance delineation surface survey for selection of project site in August 2019 for operation of wide body aircraft. Ministry of Civil Aviation has given in-principal approval for execution of the project with the help of AAI in October 2019. In January 2020 AAI has signed a memorandum. A Memorandum of Understanding (MoU) has been signed with the Government of Himachal Pradesh for the construction and operation of the airport through a joint venture company. The airport will have one unidirectional runway, initially suitable for handling aircraft up to ATR 72. E. CW has been appointed as the project consultant and tenders were issued for environmental impact assessment of the project after site visits in July 2020.

1.2 Need for new airport in Mandi district:

Mandi district is fast emerging as a major economy in the state and is connected to Pathankot via National Highway 154 and to Manali and Chandigarh via National Highway 21. Mandi is one of the fastest developing cities of Himachal Pradesh and serves as a gateway to Kullu and Manali, Lahaul and Spiti Valley and Ladakh. Being the district headquarters, the entire district depends on the city for trade and commerce, services, and civil administration. The economy of the region is mainly agrarian.

Though the economy of Mandi district is mainly agrarian based, but due to the efforts of the state government, the district has shown growth in other sectors of the economy and is home to several large industries. The state government has signed MoUs with major cement players such as Harish Cement (Grasim) at Sundernagar (Mandi district), India Cements Limited at Gumma-Rohaha (Shimla) and Lafarge India Limited at Alasindi (Mandi) for setting up cement projects. It serves as a major engine of economic growth, an important source of revenue income and a generator of diverse employment.

Presently there are three airports in the state of Himachal Pradesh at Jubbarhatti in Shimla district, Gaggal in Kangra district and Bhuntar in Kullu district but none of the existing airports are operational due to operational constraints and geographical location to handle international flights. Not suitable. Himachal Pradesh is primarily a hilly state and unavailability of other modes of transport makes roads the only means of inter-state and intra-state transport. In addition, long travel time and safety are major issues in mountainous areas, especially during inclement weather conditions, so air connectivity offers a significant advantage in terms of time savings and safety.

Recognizing the need for reliable and seamless air connectivity to regional, national, and international destinations, the State Government aims to create a world-class aviation infrastructure in the State to make Himachal Pradesh a preferred destination for investment in aviation and allied businesses. Will make Airports will be constructed as centers of economic activities.

In addition, the proposed airport at Nagchala (Mandi) will be of strategic importance due to its proximity to the Union Territory of Ladakh and will serve as a defense air base during emergencies.

Therefore, keeping in view the overall development of the state and the development of Mandi district and to bring Himachal Pradesh on the international aviation map, the state government has planned to develop an international airport at Nagchala near Mandi town. Which is suitable to operate widely. The proposed site is centrally located as per the norms of international flights and is in close distance with other important/religious/tourist places.

1.3 Project Site:

The site identified for the proposed new greenfield airport at Nagchala is located about 10 km from Mandi town on NH 154. The land of seven villages (DPF Dyoda, Jarlu, Dhaban, Sayanh, Tawan, Kummi and Chatru) of Balh tehsil of Mandi district has been selected for the construction of the airport. The site selected for the new greenfield airport is mainly agricultural land and the area is surrounded by flat terrain and hills. However, the site is a low-lying area in the plains, with three main rivulets (rivers), namely the Suketi, the Kansa and the Chail, flowing through the area of the proposed airport. This place gets submerged during the rainy season. The core area of the selected site consists of private land and some part of government land. A portion of Demarcated Protected Forest (RCF) also falls within the proposed site area.

The selected site of the proposed greenfield airport is village Nagchala (31°37', 76°56') in Balh tehsil of Mandi district. The GPS coordinates of the identified boundary of the proposed airport are given in Table-1:

Map of land marked for development of Greenfield Airport at Mandi is enclosed.

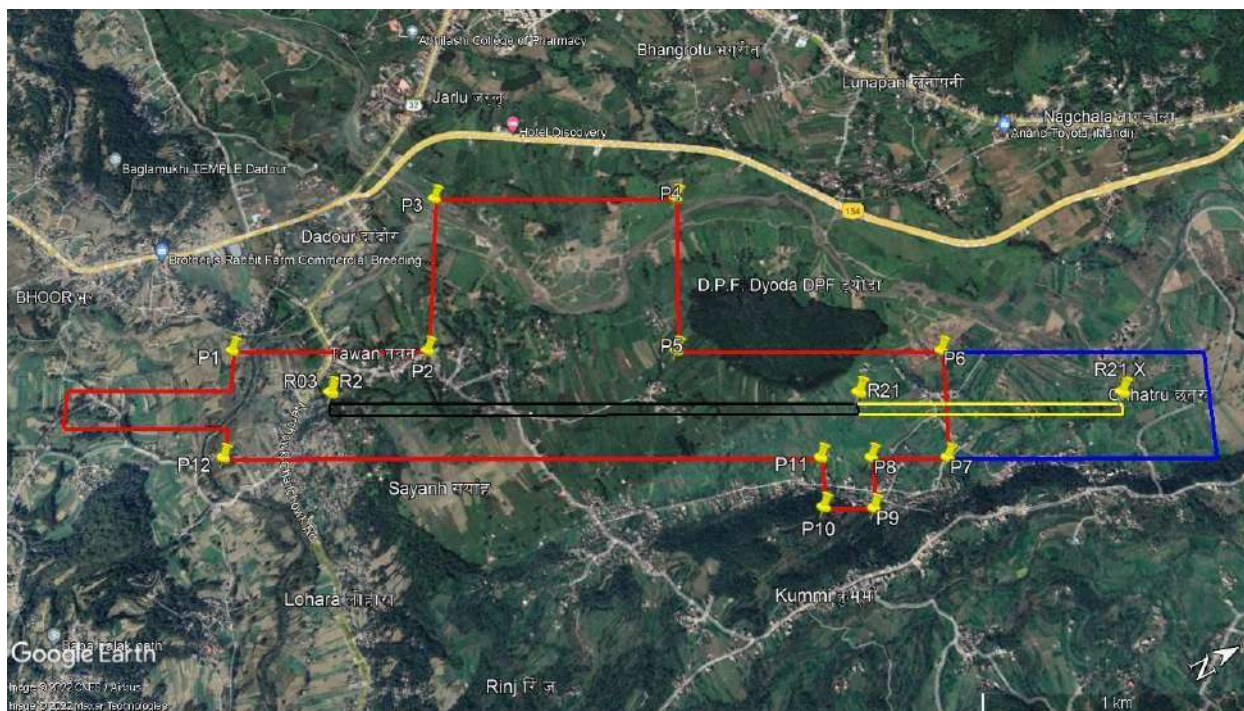

Table 1 GPS coordinates of the identified boundary of the proposed airport

Scale	Description		
Project Name	Greenfield Airport, Mandi, Himachal Pradesh		
Scale	Tehsil: Balh, District Mandi, Himachal Pradesh		
	S.No.	Latitude	Longitude

Nearest Railway Station	Kiratpur Saheb - 10 kms		
Nearest Airport Bhuntar	Bhuntar Airport, Kullu - 60 kms		

Source: Detailed Project Report

1.4 Advantages of The Site as An Airport Construction Site:

The site has the following advantages as a construction site for the new greenfield airport in Mandi district:

- The site is about 10 km from Mandi town and very close to National Highway-154 Most of the construction site is flat.
- The plot is about 5000 meters long and about 1000 meters wide.
- The plot is in almost direct connectivity with Chandigarh-Kullu-Manali Highway No. 154. Due to which the infrastructure related to the airport can be developed in a planned manner in future.
- There is ample scope for development of commercial infrastructure towards Mandi town.
- The airport is suitable for all infrastructure for operational purposes which can be integrated with the city infrastructure in future.
- The site is outside the local flying areas of the Indian Air Force.

1.5 Alternative Location for The Project:

Talking To the Residents of The Affected Area and The Members of The Panchayat, It Was Found That the Land in The Proposed Area Is More Fertile for Crop Production. The Construction of The Project Will Reduce Vegetable Production in The Area. People Have Told JAHU The Alternate Location for The Project. Whose Distance Is About 35 Km from Balh, About 46 Km from Mandi, About 42 Km from Hamirpur and About 47 Km from Bilaspur. Nap. The Team Members Along with Lekhpal/Patwari and Kanungo of The Concerned Area Visited Jahu Area and Found That the Land of The Area Is Stony and Less Fertile Than the Proposed Area. As Compared to The Proposed Area, The Residence of Less People Will Be Affected in This Area, Due to Which the Problem of Less Displacement Will Arise. But Due to The Area Being Affected by Khad (River),

The Problem of Water Logging in The Area Can Be More. That's Why App. The Team Will Suggest That Only After the Suggestion of The Technical Team for Site Selection, The Alternative Site for The Project Should Be Selected at Jahu.

Picture of the alternate location for the project (Photo)

Chapter 2

Study Methodology of Social Impact Assessment

2.1 Introduction:

According to the Right to Fair Compensation and Transparency in Land Acquisition Rehabilitation and Resettlement Act 2013 (Gazette of India Extraordinary Part-II, Section-I, 27 September 2013) and Himachal Pradesh Social Impact Assessment Rules, 2015, whenever land for public purpose intend to acquire, it shall consult with the Panchayat, Municipality or Municipal Corporation at the village level or at the ward level, as the case may be, in the affected area and in consultation with them, in such manner and from such date as may be specified by that Government, Will conduct social impact assessment studies. The following shall be included in other cases under the social impact assessment study referred to in sub-section (1) of Chapter-II Section (4). That is, (a) determining whether a public purpose is served by the proposed acquisition. (b) an estimate of the affected families and the number of families likely to be displaced. (c) the extent of public and private lands, buildings, settlements, and other similar assets likely to be affected by the proposed acquisition. (d) whether the extent of the land proposed for acquisition has been fixed as a completely realistic minimum for that project. (f) whether acquisition of land at an alternative place has been considered and has not been found feasible. (vi) study of the social impacts of the project and the nature and cost of their mitigation and the impact of these costs vis-a-vis the benefits of the project on the overall cost of the project. Thus, it has been made necessary to assess the social impact before acquiring the land of private landowners for any public purpose.

2.2 Need for Social Impact Study:

The construction of Mandi airport is an important project of the state government. Land is required in the concerned district for the construction of the airport. This includes both government and private land. Private landowners whose land will be acquired by the District Administration under the available rules and transferred to the Department of Tourism and Civil Aviation, Government of Himachal Pradesh. In this connection it is to be mentioned that in compliance with the Right to Fair Compensation and Transparency in Land Acquisition, Rehabilitation and Resettlement Act 2013, i.e., Himachal Pradesh Social Impact Assessment Rules 2015 (HPSIA Rules, 2015),

acquired for any public purpose It has been made mandatory to conduct a social impact assessment study to assess the land to be developed. Accordingly, the Social Impact Assessment study submitted by the Social Impact Assessment Unit, (HIPA), Government of Himachal Pradesh, SR Asia was completed as per the tender of HIPA.

2.3 Objectives of the study:

The purpose of the presented social impact assessment study is to identify the effects on the social, economic, and cultural status of the families affected by the acquisition of land for the construction of the airport and suggest ways to minimize these effects. social impact assessment study presented Rules, 2015 for the following purposes.

- To assess whether the proposed acquisition serves a public purpose and the land acquired is the minimum necessary for the project.
- To estimate the number of affected families and those likely to be displaced either residentially, occupationally, or both.
- To assess the socio-economic condition of the families affected by the land acquisition of the project.
- To study the social impacts of the project by including both families directly losing land as well as indirectly affected families due to loss of common property resources (CPR), socio-economic infrastructure etc. Estimating the impact of costs and benefits of the project.
- An alternative site has been considered for the purpose to find out where there is least displacement problem, but the site itself is not suitable for the project.
- To suggest remedial intervention measures by designing suitable policies and programs through Social Impact Management Plan (SIMP).

2.4 Study Methodology:

5.28 Hectare, 20.40 Hectare, 8.81 Hectare, 25.21 Hectare, 35.70 Hectare, 78.25 Hectare for Greenfield International Airport Project of seven (DPF Dyoda, Jarlu, Dhaban, Syanh, Tawan, Kummi and Chatru) villages of Balh Tehsil of Mandi district. and 58.47 ha, thus the total land affected by the acquisition is 232.12 ha. Out of seven suitable villages, one village DPF Dyoda

Forest Department and Jarlu Village Municipality Council are non-inhabited. Efforts were made by the SIA team of SR Asia organization to meet 3448 affected landowners of all the villages from December 30, 2022, to January 22, 2023, for continuous house-to-house interviews and those landowners who are outside the village They were interviewed through telephone or through family members. In this regard, it would also be necessary to mention that out of 3715 landowners who were contacted for interview, 1227 landowners were those who were interviewed in another village, their interview schedule was not filled again or there were some landowners whose names were not in the list. I bar. There were times, so they were interviewed once or there were some landowners who belonged to joint family who had land in the name of other family members also, so their interview schedule was not filled. In this way, a total of 1757 landowners could be interviewed. But 741 landowners could not be interviewed due to being outside the village and for various other reasons. Whose details are given in Table 2. It would also be necessary to mention in this regard that an attempt was made to find out the social, cultural, and economic status based on a total of 1757 landowners. The list of total affected landowners, the list of interviewed landowners and the reasons for not interviewing have been given in Appendix 3, 4 and 5 respectively. Apart from this, data was obtained from different levels like gram panchayat and tehsil level regarding the affected villages. Along with this, primary data was also collected based on group discussions in the affected villages. Apart from this, this social impact assessment study was completed after consulting various stakeholders related to the construction of the airport and getting the desired information.

Table 2 Village wise number of affected landowners

S. No.	Village name	Total number	Interviewed	Not interviewed	Clean interview
1	DPF Dyoda	0	0	0	0
2	Jarlu	155	105	50	77
3	Dhaban	196	139	57	135
4	Syanh	487	386	101	247
5	Tawan	813	747	66	252
6	Kummi	1498	1158	340	656
7	Chatru	576	449	127	390

2.5 Tools of Study:

A combination of both qualitative and quantitative methods was used for the study. The following instruments were used in carrying out the present Social Impact Assessment study.

1. Desk Review
2. Site Visit
3. Village Level Proforma
4. Schedule for affected families,
5. Participatory Rural Appraisal (PRA)
6. Instructive context for group discussion and
7. Data Analysis and Report Writing

Desk Review

During the study, the PWD Act 2013, available reports, documents related to the project and records from Revenue and Land Reforms Department, and literature including maps, details of landowners, etc. were reviewed. This was done to understand the socio-cultural and economic condition of the PAF, the magnitude of the impact of the project and the measures that can be taken to mitigate the negative impacts of the project. The desk review will also help develop tools for primary data collection.

Site Tour:

The project team physically visited the land to be acquired to make an independent assessment of the project's land and resources on land use. This will also help in assessing the possible impacts.

Village Survey Questionnaire:

An offline questionnaire was developed to understand the socio-economic profile of the affected villages and all categories of project impacts. Offline questionnaire was used for data collection purpose while online questionnaire was used for data tabulation and data analysis purpose. The questionnaires consisted of both open and closed type questions to obtain the necessary information as per the provision of the Act. A sample questionnaire is attached to the report. In addition, focused group discussions were conducted with project affected families during site visits and questionnaire surveys to understand community issues. These were further analyzed to give a holistic view of the SIMP (Social Impact Management Plan).

Personal Survey Questionnaire:

A questionnaire was designed to understand the socio-economic profile of the affected families and all categories of project impacts. Both offline and online questionnaires (drawn from Zoho Surveys) were prepared. Offline questionnaire was used for data collection purpose while online questionnaire was used for data tabulation and data analysis purpose. The questionnaires consisted of both open and closed type questions to obtain the necessary information as per the provision of the Act. A sample questionnaire is attached as an appendix to the report. Also, focused group discussions were conducted with project affected families during site visits and questionnaire survey to understand the community issues. The Social Impact Management Plan (SIMP) was analyzed to give a holistic view.

Participatory Rural Appraisal (PRA):

The PRA activity was undertaken to map the resources and community profile of project affected families. A detailed assessment of the socio-political profile of the community and villages is given in the chapter on Socio-economic Profile.

Guiding Context for Group Discussion:

Stakeholders' consultations were held with project affected families, panchayat members, collectorate officials etc. to understand the situation in depth. The maps of the project site and other related documents were made available by the Collectorate's office. These documents were used to understand the details about the land, the need to acquire that land, the benefits the project would bring to the village and its impact on stakeholders. The details of the discussions held are mentioned in the following chapters of the report.

Data Analysis and Report Writing:

Data collected through individual questionnaires and public consultations were analyzed to provide a summary of relevant baseline information on the affected population. All categories of project impacts including direct and indirect impacts of a physical and economic nature on people and the general environment.

After the completion of the public hearing, the final report is submitted to the District Magistrate. All the data collected through primary and secondary record research was compiled and analyzed in the form of reports.

2.6 Team Combination:

This Social Impact Assessment study was completed by the following staff of SR Asia Sanstha Ghaziabad.

S. No.	Name	Post	Experience
1	Mr. Birendra Dutt Raturi	Expert advisor	25
2	Mr. Ajay Kumar Singh	Project Head & Research Associate	24
3	Ms. Taranjeet Kaur	Communications manager	10
4	Ms. Rameen Anjum	Research Associate	4
5	Ms. Sneha Raturi	Research Assistant	2
6	Mr. Aakash Raturi	Research Assistant	2

2.8 Public Hearing:

RFCTLARR Section 5 of the 2013 Act envisages that whenever there is a need to conduct a Social Impact Assessment Study, the Government shall ensure that a public hearing is held in the affected areas to ensure that the views of the affected families are recorded. have been carried out and included in the Social Impact Assessment Study Report. Public hearing should be organized after presentation of draft report of SR Asia and advertisement.

Chapter 3

Land Assessment

Land is the most important resource for any type of construction work. Land should be available in abundance especially for airport construction. As stated earlier, the drawing has been done for the construction of airport in seven villages of Balh tehsil of district Mandi. In which the land of village named DPF Dyoda belongs to Forest Department (Government land). While Jarlu village (Municipal Council) is non-inhabited and remaining five villages Dhaban, Syanh, Tawan, Kummi and Chatru are inhabited.

3.1 Land use:

The land use details of the affected villages are given in Table 3. It is clear from the table that in the affected seven villages of Tehsil Balh, 2.50 percent of the total geographical area is under forests, 1.33 percent of the area is barren and uncultivable land, 17.15 percent of the area is used other than agriculture, 3.66 percent of the area is pasture, under other trees and shrubs in 2.18 percent area, fallow land in 0.31 percent area and net sown in 72.87 percent area. The details of village wise land use configuration are clear in the table.

SIA Report – Mandi Greenfield International Airport – Himachal Pradesh

One village belongs to forest department.

3.2 Details of desired land etc. under the project:

The details of land required under the project, number of villages and airport in the district are shown in Table 4. From the observation of the table, it is known that in 7 villages of Balh tehsil of district Mandi, a total of 232.12 hectares of land is being affected under the airport, out of which 26.31 hectares (11.34 percent) of land is government, remaining (88.67 percent) 205.81 hectares of land is private. It belongs to the farmers. Social impact assessment of 232.12 hectares of land has been done by our organization.

Table 4 Details of desired land etc. under the project

S. No.	Description	Number/Area (Ha.)
1	Affected land under alignment	232.12 (100.00)
2	Government Land	26.31 (11.34)
3	Private Land	205.81 (88.67)
4	Land For Social Impact Assessment	232.12 (100.0)
5	Total Number of Villages	7

Figure 1 Details of desired land etc. under the project

3.3 Details of Land to Be Acquired:

In this regard, it would also be appropriate to mention that because of the land acquisition of Mandi district, the land of total 7 villages are proposed for affected/social impact. In which 88.67 percent land is private and 11.34 percent land being government. In total seven villages, the land of Jarlu village Gairabad and DPF Dyoda belong to the forest department. Village-wise area of government and private land is given in Table-5.

Table 5 Village-wise details of land to be acquired under the project.

(In land Hectare)

S. No.	Village Name	Affected land under Alignment	Government land	Private land
1	Dhaban	8.81 (100.00)	1.55 (17.59)	7.26 (82.41)
2	Jarlu	20.40 (100.00)	7.80 (38.24)	12.60 (61.77)

3.4 Description of cultivated and uncultivated land:

Village-wise details of cultivable and uncultivated land to be acquired under the project are given in Table-6. Of the seven villages affected by the project, 180.88 hectares (77.93 percent) of the total land is cultivated, while 51.24 hectares (22.07 percent) is uncultivated. Of the total agricultural land, 99.82 percent land is private, and 0.18 percent is government land. Of the total uncultivated land, 49.30 percent land is private, and 50.70 percent is government land. Village-wise details of agricultural and non-agricultural land are given in Table 3.4.

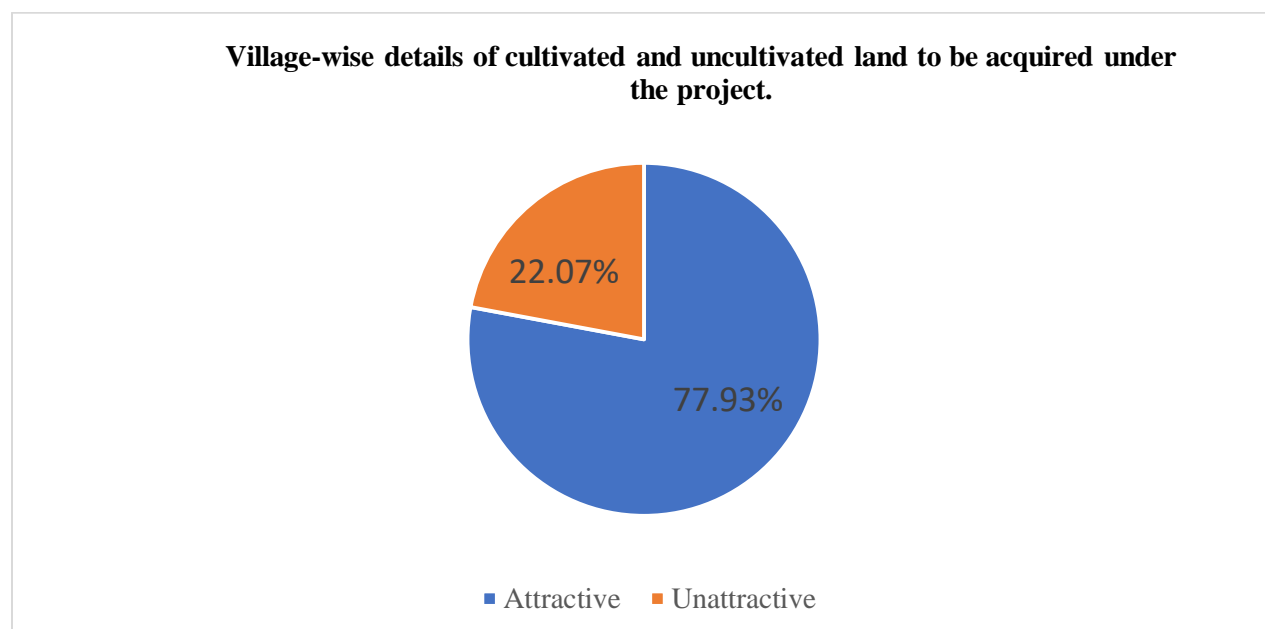

Figure 2 Village-wise details of cultivated and uncultivated land to be acquired under the project.

3.5 Displaced population from the project and details of affected houses/built structures:

Out of seven villages of Balh tehsil affected, two villages have no population. The population and assets of the remaining five villages are being affected, whose details are given in Table 7. It is known from the table that about 2862 population is being displaced by the project, whereas about 589 residential houses (mostly residential houses are pucca and two to three story built), and about 986 other built structures (cow sheds, toilets, shops, government buildings, Places of worship, schools, hospitals, and cremation grounds etc.) are affected under the alignment. Maximum 32.42 percent of Kummi and minimum 1.33 percent of Dhaban village are among the affected displaced population. While 39.05 percent of the residential houses are of Kummi and 1.53 percent of Dhaban village. Village-wise details of the population to be displaced by the project and the affected houses/built structures are given in the table.

Table 7 Details of the population to be displaced by the project and the affected houses/built structures.

S. No.	Village name	Potential number of displaced populations	Affected land under alignment	
			Number of houses	Number of other structures built
1	Dhaban	38 (1.33)	9 (1.53)	3 (0.30)

Jarlu Village is uninhabited.
DPF Dyoda Village belongs to Forest Department

3.6 Type of land and number of Khasras:

The land to be acquired under this project is agriculture, non-agriculture, and commercial land. Land is both public and private. The details of land and number of khasras to be acquired village-wise under the project are given in Table 8. It is known from the table that out of these seven villages maximum 860 Khasra Kummi and 86 Khasra are from Dhaban village. Area-wise also 33.71 percent of the total area is of Kummi and 3.79 percent of the land is Dhaban Village Co.

Whereas DPF Dyoda village comes under Forest Department. Village wise number of measles to be acquired and details of land are given in the table.

Table 8 Village-wise number of measles to be acquired under the project and details of land.

(Land in Hectare)

DPF Dyoda Village belongs to Forest Department

3.7 Land Use:

During discussion with PAF, it was observed that agriculture is the major area of the project site. Apart from this, there are also non-agricultural, residential, commercial, and other government establishments.

Chapter-4

Social and economic profile of the affected villages

As mentioned in the previous chapters, seven villages of Tehsil Balh of district Mandi are affected by land acquisition under the airport project. According to the Fair Compensation and Transparency in Land Acquisition, Rehabilitation and Resettlement Act, 2013 and 2015, social impact assessment has been made mandatory in relation to the affected villages and landowners before land acquisition. In this process, an attempt has been made to describe the socio-economic characteristics and profile of the affected villages in the present chapter.

4.1 Location of Villages:

The location details of the affected villages are presented in Table 9. All the affected villages are located at 1 to 6 km from the tehsil. There are bus stations in village Syanh and Towa, while the distance of bus station from all other villages is 0.5 to 3 kms. are up to the distance of all the villages from block headquarter is from 3 kms to 10 kms. The details of the distance of the affected villages from various other administrative institutions are given in the table.

Table 9 Distance of villages affected by various administrative institutions.

4.18 Main Crops:

The details of major crops sown in the affected villages are shown in Table 26. It is noteworthy that this description is in relation to 6 villages. Wheat, barley, peas, and mustard are cultivated in 100 percent villages in rabi crops. In kharif crops, paddy and jowar are sown in 100 percent villages. While no crops are sown in Zayd's crops. Regarding commercial crops, vegetables (tomato, cabbage, brinjal, okra, cucumber etc.) and potatoes are sown in 100 percent of the inhabited villages. The main crops of the affected villages are vegetables (tomato, cabbage, brinjal, okra, cucumber etc.). Vegetable cultivation is abundant in these villages. Which is the main source of income of the farmers of the village.

4.20 Reasons for Disagreement:

According to Pradhans/Panchayat members of the affected villages, the reasons for non-voluntarily giving land for the project by the landowners are given in Table 28. In 100 percent of the villages the circle rate is much less than the market value, the land is very fertile, and the land is very valuable, there is fear of unemployment in 83.33 percent of the villages and the problem of flood in the village due to the project, and in 66.67 percent of the villages land is not available. The loss of many shareholders and the problem of migration from the village etc. were cited as the reasons.

Table 28 Reasons for not giving land for the project.

(Multiple answer)		
S. No.	Cause	Number of villages
01	Circle Rates Are Lower Than Market Rates	6 (100.00)
02	Soil Fertility	6 (100.00)
03	Land Is Very Valuable	6 (100.00)
04	Fear Of Unemployment	5 (83.33)
05	Having Multiple Shareholders	4 (66.67)
06	Migration Problem	4 (66.67)
07	The Problem of Flood in The Village Due to The Project	5 (83.33)
	Total Number of Villages	6(100.0)

Source: Primary Data

4.21 Impacts of The Project:

According to the Pradhans/members of the affected villages, the details of negative and positive impacts of the project are given in Table 29. In relation to the negative effects of the project, the agriculture land will be reduced by 100 percent, the problem of migration from the village, the loss of the main / link roads of the village by 83.33 percent, the problem of water logging in the village, the reduction in vegetable production, the irrigation facilities. Reduction, increase in pollution by 50.00 percent and difficulty in movement of farmers to and from the fields etc. were described as negative multiple effects.

SIA Report – Mandi Greenfield International Airport – Himachal Pradesh

Table 29 Project Impact

(Multiple answer)		
S. No.	Effect	Number of villages
A.	Negative	
01	Loss of main / link roads of the village	5 (83.33)
02	Cultivable land will decrease	6 (100.0)
03	The problem of pollution will increase	3 (50.00)
04	Road accidents will increase	2 (33.33)
05	Difficulties in movement of farmers to the fields	3 (50.00)
06	Migration problem	6 (100.0)
07	Water logging problem in village	5 (83.33)
08	Decrease in vegetable production	5 (83.33)
09	Lack of irrigation facilities	5 (83.33)
B.	Positive	
01	Rapid development of the area	6 (100.0)
02	Transport facility will increase	6 (100.0)
03	Ease of doing business will increase	4 (66.67)
04	Travel time will be saved	6 (100.0)
05	Migration from region to city will reduce	4 (66.67)
06	There will be improvement in the living conditions of the residents	3 (50.00)
07	Health related resources will be developed	6 (100.0)
08	Education related resources will be developed	5 (83.33)
09	There will be an increase in the rate of other land	6 (100.0)
10	New employment opportunities will be available	5 (83.33)
11	There will be an increase in the value of other land	6 (100.0)
12	There will be an increase in tourism	6 (100.0)
13	Very useful from a strategic point of view	5 (83.33)
	Total number of villages	6 (100.0)

Source: Primary Data

One village belongs to forest department.

While development of village/area by 100 percent, facilities of transportation, development of health-related resources, time will be saved in travel, tourism will increase and value rate of other lands will increase, while new employment will be created by 83.33 percent. Opportunities will be available, educational resources will be developed and are very useful from strategic point of view and business sources will increase by 66.67 percent, migration from villages to cities will reduce and the living conditions of the residents will improve by 50 percent. Positive multiple effects were told.

Chapter-5

Socio-Economic And Cultural Impact

Under the present chapter, an attempt has been made to assess the effects on various communities and institutions because of acquisition of land for the construction of airport in district Mandi. Projects of this nature have an impact in three phases. (1) On the social and economic condition of the affected families in the process of land acquisition before the start of the project, (2) On the presence of outsiders at the construction sites during the construction period and on the presence of heavy machines and transport at the construction site and (3) In the period of implementation of the project after the completion of the project. In the present chapter, because of land acquisition for the project, the impacts on the concerned areas, villages and families have been assessed based on interviews with the affected farmers.

5.1 Characteristics of the affected families:

As it is mentioned in the study methodology that the landowners whose names are repeated in the list or because of being in another village or because of belonging to the same family, have been interviewed only once. Based on this, the social characteristics of the affected families are being described in the next paragraphs.

5.1.1 Gender:

The gender wise classification of the affected landowners is given in Table 30. Out of the total interviewed affected landowners, 68.87 percent are men and 31.13 percent are women. Village-wise details of male and female have been presented in the table.

Table 30 Gender wise classification of affected landowners

S. No.	Village name	Male	Female	Total
1	Dhaban	100 (74.07)	35 (25.93)	135 (100)
2	Jarlu	57 (74.03)	20 (25.97)	77 (100)
3	Syanh	176 (71.25)	71 (28.74)	247 (100)
4	Tawan	178 (70.63)	74 (29.37)	252 (100)
5	Kummi	432 (65.85)	224 (34.15)	656 (100)
6	Chatru	267 (68.46)	123 (31.54)	390 (100)
	Total	1210 (68.87)	547 (31.13)	1757 (100)

Figure 3 Gender wise classification of affected landowners

5.1.2 Educational Qualification:

In the educational qualification of the interviewed affected landowners, 13.03 percent are illiterate while 28.51 percent are literate. In other educational qualifications, 25.38 per cent had high school, 12.35 per cent intermediate, 9.62 per cent less than high school, 6.77 per cent graduate and 4.33 per cent postgraduate. The details of village wise educational qualification are displayed in Table 31.

Table 31 Classification of affected landowners according to educational qualification

S. No.	Names of villages	Dhaban	Jarlu	Syanh	Tawan	Kummi	Chatru	Dhaban
1	Illiterate	10 (7.41)	12 (15.58)	30 (12.15)	24 (9.52)	86 (13.11)	67 (17.18)	229 (13.03)
2	Literate	44 (32.59)	15 (19.48)	80 (32.39)	70 (27.78)	248 (37.80)	44 (11.28)	501 (28.51)

5.18 Type of displacement due to land acquisition:

This has come to the notice of SIA team during the discussion that, affected families has houses and lands in nearby villages however, exact records were not made available to the SIA team on the same. Those who become homeless and landless however due to the land acquisitions need to be rehabilitated and resettled according to the demands of the preferred location to the PAFs/PAPs.

As per survey the nature of displacement of landowners affected by land acquisition for the construction of Greenfield International Airport project is given in Table 55. It is known from the table that out of the interviewed landowners, 11.50 percent landowners have housing, 21.06 percent landowners have business and 33.01 percent landowners have land that can be affected due to both (residence and business).

Table 55 Type of displacement due to land acquisition

S. No.	Name of affected village	Accommodation	Business	Both	Nothing (land)	Total
1	Dhaban	8 (5.93)	38 (28.15)	41 (30.37)	48 (35.56)	135 (100)
2	Jarlu	4 (5.19)	4 (5.19)	10 (12.99)	59 (76.62)	77 (100)
3	Syanh	79 (31.98)	40 (16.19)	90 (36.44)	38 (15.38)	247 (100)
4	Tawan	32 (12.70)	23 (9.13)	144 (57.14)	53 (21.03)	252 (100)
5	Kummi	42 (6.40)	130 (19.82)	245 (37.35)	239 (36.43)	656 (100)
6	Chatru	37 (9.49)	135 (34.62)	50 (12.82)	168 (43.07)	390 (100)
	Total	202 (11.50)	370 (21.06)	580 (33.01)	605 (34.43)	1757 (100)

Figure 22 Property to be affected by land acquisition.

5.19 Reasons for disagreement:

The multiple response details of the reasons given by the interviewed affected landowners for their disagreement to give land for the construction of the international airport project are given in Table 56. It is clear that the circle rate is less than the market value by 100 percent, the land is highly

fertile by 97.44 percent, the loss of livelihood by 77.08 percent, the land being highly valued by 63.12 percent, the fear of unemployment by 68.92 percent, migration from the village by 52.08 percent, 46.78 per cent excessive attachment to land, 43.54 per cent having multiple shareholders of the land, 41.66 per cent having ancestral land and 38.42 per cent cited the problem of flood in the village due to the project.

Table 56 Reasons for not giving land for the project by the landowners.

(Multiple)

S. No.	Name of affected village	Total number
1	Circle rates are lower than market rates	1757 (100)
2	Soil Fertility	1712 (97.44)
3	Land Is Very Valuable	1109 (63.12)
4	Fear Of Unemployment	1211 (68.92)
5	Having Multiple Shareholders	765 (43.54)
6	Migration Problem	915 (52.08)
7	The Problem of Flood in The Village Due to The Project	675 (38.42)
8	Loss Of Livelihood	1367 (77.80)
9	Attachment To Land	822 (46.78)
10	Being The Land of The Ancestors	732 (41.66)
	Total Number of Landowners	1757 (100)

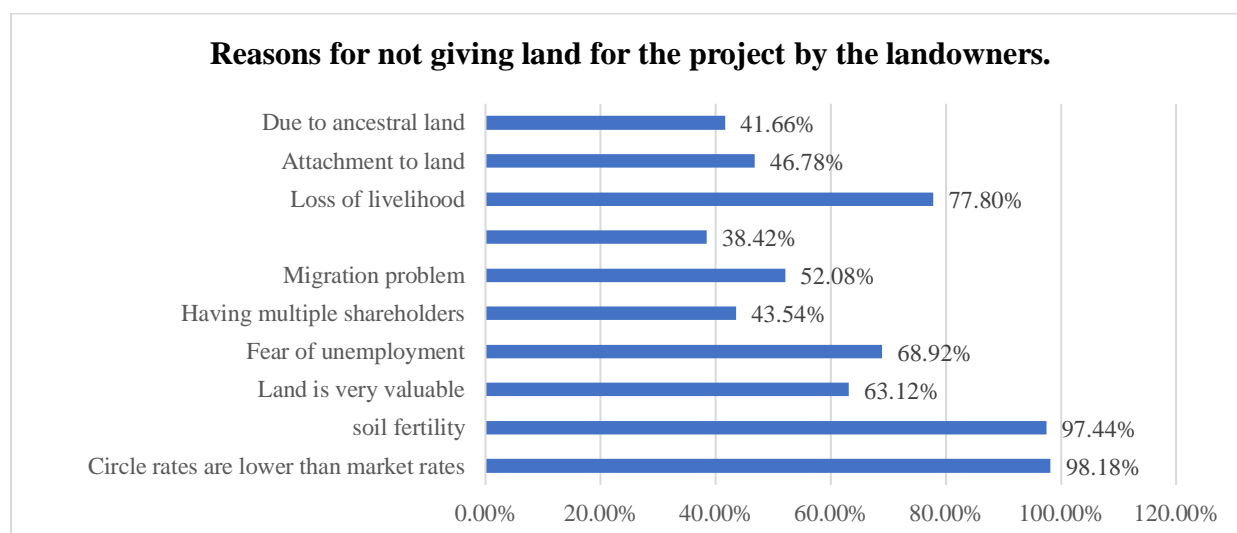

Figure 23 Reasons for not giving land for the project by the landowners.

5.20 Conditions stated by the landowners on which they agree to give the land:

Information was also obtained from the affected landowners that on what terms they would agree to give the land. Whose multiple answer details are presented in Table 57. In this regard, if the

circle rate is equal to the market value by 100 percent, 86.80 percent should be given land equal to land acquisition and quality land should be given at some other place, 69.61 percent should get a job in government or semi-government department, 60.16 percent should start alternative employment. Physical/financial assistance should be given to do this, 54.92 per cent after solving the problem of displacement, 49.16 per cent on getting compensation on time and 44.28 per cent after part disposal etc.

Table 57 The conditions stated by the landowners on which they agree to give the land.

(Multiple)

S. No.	Details details	Total number
1	When the circle rate is equal to the market value	1757 (100)
2	Land equal to land acquisition and of quality should be given at some other place	1525 (86.80)
3	Be Given a Government/Semi-Government Job	1223 (69.61)
4	After Part Disposal	778 (44.28)
5	Physical/financial assistance should be given to start alternative employment	1057 (60.16)
6	After troubleshooting the displacement	965 (54.92)
7	Compensation on time	864 (49.17)
Total number of farmers affected		1757(100)

5.21 Adverse Impacts from the Project:

According to the interviewed landowners, the topic of adverse impact due to the construction of the airport was discussed, whose multiple responses are given in Table 58. In this regard, cultivable land will decrease by 38 percent, pollution will increase by 15 percent, children will face problems in going to school by 11 percent, farmers will face problems in going to their fields by 28 percent, and 55 percent farmers will face some special side effects. It has been said about not being there.

Table 58 Negative effects of airport construction

(Multiple answer)

S. No.	Name of affected village	Number of cultivators
1	Cultivable Land Will Decrease	1757 (100)
2	Decrease In Vegetable Production	1456 (82.87)
3	Lack Of Irrigation Facilities	1735 (81.67)
4	Difficulties In Movement of Farmers to The Fields	453 (25.78)
5	Migration Problem	1132 (64.43)
6	Water Logging Problem in Village	567 (32.27)
7	Increase In Pollution	654 (37.22)
8	Road Accidents Will Increase	321 (18.27)
9	No Effect	458 (26.07)
	Total Number of Farmers Affected	1757 (100)

5.22 Benefits / Positive Impacts from The Airport:

According to the interviewed landowners, the details of the benefits of the construction of the airport are given in Table 59. In this regard, there will be rapid development of the area by 100 percent and the value of other lands will increase, 99.66 percent in the convenience of transportation. Tourism will increase by 95.33 percent, new employment opportunities will be available by 89.19 percent, time saved in travel by 75.30 percent, means of self-employment increased by 66.25 percent landowners, 64.26 percent reduced migration from villages to cities 82.87 percent will improve living conditions and 56.18 percent will be very useful from strategic point of view.

Table 59 Benefits of building the project.

(Multiple)

S. No.	Name of affected village	Number of cultivators
1	Rapid development of the area	1757 (100)
2	The value of other lands will increase	1757 (100)
3	Transportation convenient	1751 (99.66)
4	Increase in means of self-employment	1164 (66.25)
5	Travel time savings	1323 (75.30)
6	Migration from village to city will reduce	1129 (64.26)

7	There will be an increase in tourism	1675 (95.33)
8	Health related resources will be developed	1097 (62.44)
9	Education related resources will be developed	1342 (76.38)
10	New employment opportunities will be available	1567 (89.19)
11	There will be improvement in the living conditions of the villagers.	1456 (82.87)
12	Very useful from a strategic point of view	987 (56.18)
Total number of farmers affected		1757 (100.0)

Chapter-6

FOCUS GROUP DISCUSSION

The team conducted an in-depth and detailed Group Discussion (FGD) to assess the vulnerability of Project Affected People (PAPs) because of constructions. This chapter covers the details of discussion on the data and information obtained from the participants and respondents during the group discussion with the people of Tawan, Dhaban, Synah, Kummi and Chatru villages and community members representing the project affected area, which is likely to be affected by the proposed Balh International Airport. As Jarlu has no inhabitant and DPF Dyoda lies with Forest Department, specific FGD were not held due to these limitations.

6.1 Need for Focus Group Discussion and Consultation

Infrastructure and development projects that imply demographic relocation of PAPs, livestock, and livelihood entail policymakers' substantial and socioeconomically sound framework on execution of resettlement and rehabilitation as per R&R Act. In this aspect, public consultation refers to the two-way exchange of information or collaborative discussion between the project proponent and the community. It is an essential component of every development initiative. These dialogues are vital for the project to be inclusive and responsive to the local community and social ecology. It brings together all stakeholders, policy-making bodies, and numerous agencies to discuss and address significant concerns to attain a mutually satisfactory outcome. It is a mechanism of involving various stakeholders, particularly affected communities, by offering them a platform to express their opinions, concerns, and apprehensions about issues and/or activities that may positively or negatively impact them, thus enabling them to enhance decision-making processes. It not only facilitates the identification of certain intangible impact and effective planning, but it also assists in the communication of information, the diminishment of their fears, and the development of rapport with the communities, all of which is paramount for the smooth implementation of such projects. The primary objective of stakeholder involvement is to raise public awareness and acceptance of a development activity or project by lowering perceived environmental consequences via education and open dialogue. In addition, public feedback can be utilized to enhance the project's design.

6.2 Focus Group Discussion - Research Design and Data Collection

Research Design and Data Collection for the Qualitative analysis of the foreseen impact of the project and opinion / view of the landowners regarding resettlement and project execution for the welfare of the society. SIA team conducted focus groups and in- depth interviews with the PAPs of all the SIX villages-1) Jarlu 2) Tawan 3) Dhaban 4) Syanh 5) Kummi 6) Chatru of tehsil Balh district Mandi (Himachal Pradesh). This in turn helped to derive emphatically many pertinent issues related to their land acquisition, livelihood, employment, social structure, the standard of living, psychological well – being etc.

The impacted community members (PAPs) participated in focus group discussions in during 29 December 2022- 23 January 2023. Most of the responders were DIZ members who worked as farmers. The number of women who took part in the focus group was simply quasi. A brief introduction to the goals and methods of the Social Impact Assessment Study and the Agency conducting the study was given at the outset of the FGD. During the FGD, members of the SIA team assisted in the role of moderator. Respondents have stated that they were aware of the Balh International Airport project, and landowners have been notified about the acquisition. Since most of the respondents were aware of the development of Balh International Airport, the Social Impact Assessment Team briefed about the background and government initiative of establishing up the proposed project to the respondents. The focus group discussion and in-depth interview outcomes were fundamental for generating suggestions for subsequent research in the study. Focus Group application was particularly helpful in collecting information about how people think, feel, or act regarding a specific topic.

The moderator had a semi-structured, open-ended set of questions and detailed discussion with senior residents/farmers/head of the families and group participants. The participants shared their opinions and ideas about the proposed land acquisition for Balh International Airport Project. They also shared their views and comments on each other's answers. The thrust was on interaction inside the group. SIA team have conducted minimum three group discussion in every single village. The meeting was attended by villagers of all age groups and each group consisted of 10-15 participated; especially women's have taken actively participated in the discussion and have vocalized their concern about airport.

Focus Group Discussions (FGDs) objective was to gather as much information as possible about the lives of the Project Affected Families (PAFs, about the areas they live in, their land use

arrangements, etc. The FGDs with project-affected people were carried out to obtain the community feedback to understand the existing socio-economic conditions of the community, particularly of the vulnerable group of the DIZ. It was carried out by Gata-wise respondents of all six villages from December 2022 –January 2023.

However, most of the PAFs expressed their consent with the proposed Balh International Airport project and considered it a means of development, small economic activities, development in the project area, source of increase in land value in the surrounding areas, and a means of bringing about urbanization. The survey team members did not face any inconvenience during the collection of information or the consultations. However, the PAPs required orientation of the project and the assigned roles of the SIA Team, and the PAPs were informed about the acquisition process under new regulations. The major concerns of the PAFs converge around a sense of loss of their land, livelihood and social ecology coupled with apprehension over the compensation packages and the timely payment of compensation. Awareness regarding the project was widespread. Therefore, it would be fair to say that the PAPs were not against the project; rather, they are looking forward to the development that will take place after the project in the surrounding areas. However, the major concern observed was about the fair compensation to comprehensively compensate for their loss of agriculture land and livelihood and change in the ecological environment.

6.3 Focus Group Study of the DIZ of the five villages: - Tawan, Dhaban, Syanh, Kummi, Chatru (Because one village is uninhabited and one village belongs to forest department.),

Anticipated project impacts on individual landowners: The proposed project site has been set up on most of the private land and community land. The community land has been given out to the community members for various activities.

It was well opined that the land to be acquired for the proposed project site will subsequently affect the common property resources of that area. However, there will be better accessibility to urban areas and availability of economic activities after the project comes into force.

i. It was observed that, as the PAFs/households are likely to be much affected by the proposed project, most of the PAFs reside on the landmarked under acquisition. In addition to this, they also expressed apprehension regarding the farmland acquired by the government for this project as a major portion (for some, their whole land) falls within the proposed project area that needs to be dismantled and compensated for the same.

ii. However, they had apprehensions about losing the farmland and the annual revenue received from it. Therefore, they demanded that the land should be allocated with the same size (area) and quality from the tehsil area to ensure regular revenue generation.

iii. Most of the respondents believed that their house comes under the project site, which will affect a major chunk of the PAFs, as they will be homeless until they have no Pucca house to settle in. However, some respondents believed that these living conditions might not remain intact unless replaced with another allocated land area with a housing facility. In such a case, there will possibly be some impact. However, there will be a huge adverse impact upon such PAPs in case of no land exchange.

6.4 The issues raised especially about nature of the source of income, whether it is agriculture or non-agriculture and proportion of agriculture, the role of women in family.

The main source of income of the villagers is from Agriculture and rest are engaged in other services such as government, semi – government, private or worked as labour in the field. The main vegetation is of cash crops (Cash crop are also known as Profit Crop is an agricultural crop which is grown to sell for profit) such as Tomato, Cucumber, Cauliflower, Pea, Cabbage, Spinach and many more. Rice and Wheat are also part of their agriculture. Women play a superior role in the family as well in the agriculture they worked in the field to earn to their livelihood.

6.5 On the impact/effect of land acquisition in their PAPs employability, on earning capability, social position, cultural ethos, family structure, mental wellness, and ecological wellness.

Majority of the villagers raised issues for the construction of the airport in Balh. It will affect their vegetation and it will result into unemployed as most of the villagers are engaged in the agriculture and most affected population in this is women. The villagers also told that Balh is considered as Mini Punjab for its vegetation and after construction of the whole vegetation will be destroyed and it will strongly affect their earning capability, social position, cultural ethos, family structure, mental wellness, ecological wellness .as they are growing almost three crops throughout the year and earning their livelihood. Development of this project will lead to extinction of flora and fauna. In general, every natural resource will destroy.

I. Land acquisition will have a negative impact on us and will drastically change our life. The establishment of the Airport and corporate sector will have a negative impact on social position,

as our identity and that of the village would be obliterated, resulting in the desolation of our social lives.

II. Land acquisition would undermine the villagers' economy, which will have a negative impact on our social lives, and the functioning of Panchayati Raj culture, which has traditionally played a pivotal role in our lives, will be weakened.'

III. Any sort of development will impact the topography of the region, resulting in negative environmental effects due to the removal of trees and the excavation of land.

IV. Giving land to the government implies that families will be dispersed since there would be no rationale for future generations to return. Following the land acquisition, future generations will relocate to other cities in quest of work. Thus, the leading cause of the family's disintegration will be acquisition.'

V. As a result, psychological distress will escalate, future concerns will begin to emerge, and family disputes will escalate with monetary compensation. Future generations will have more money, which will increase the odds of family values deteriorating. The ecosystem will be affected, and pollution will increase in the DIZ.

6.6 Their opinions/perceptions were discussed and sought regarding an increase in employment productivity, business opportunity, land price, public facility, formal employment productivity and standard of living in the affected area.

I. They will be financially secure if the government ensures that they are employed under the proposed project; yet, if the government fails to do so, their livelihood would be jeopardized.'

II. This project will boost government and tourism income, but it will have positive influence on the income of rural inhabitants in the surrounding areas, and it may even have a positive impact.

III. The proposed project will improve industrial prospects in the area, but only if the government secures rural people's involvement in the scheme; otherwise, the rise in industrial opportunities will not benefit the rural people, i.e., PAPs.

6.7 Their opinion/perceptions were discussed and sought regarding an increase in food security in the affected area, women employment productivity and standard of living,

The acquisition of agricultural land may adversely affect the food security of the region. Most of the women here are engaged in agricultural work, so the employment productivity of women will be adversely affected by the proposed project. Since they lack any vocational training and skills, and their future prospect may also suffer. Furthermore, the acquisition of agricultural land for the

proposed project will negatively affect their standard of living because agriculture and animal husbandry are the main source of income in these villages.

6.8 To understand their concern about acquisition's effect on the local economy of the area, and economic dependency,

Land acquisition will likely destroy the basic structure of local economy although new kind of opportunities may arise but as the villagers are not well-qualified and skilled and heavily dependent on agriculture and animal husbandry, switch over to other form of earnings will become difficult, and in turn land acquisition will increase their economic dependence for lively hood.

The proposed project will have a negative impact on the surrounding area's soil fertility. This project will pollute the soil, reduce soil fertility, and cause carbon emissions through HCV 120 and LCV movements, all of which will negatively influence the environment. In addition, the proposed project will raise the region's Air Pollution Index (AQI).

6.9 Impact on the issues like the water source, water reserve and underground water level of the surrounding area and the forest reserve in the project area also raised and discussed in FGD.

The formation of the proposed project would have a negative impact on the water sources of the area. The amount of pollution in the water will increase, groundwater levels will also go down, natural water sources will be negatively affected, and these will have a very adverse effect on the area's water sources.

6.10 Impact on health Facilities discussed in FGD.

Most of them believed the project may positively impact the growth of health facilities and hospitals and ensure better medical facilities for the community and the neighboring villages.

6.11 Impact of this project on the increase in educational facility/schools/colleges and transportation and road facility in the area.

This project may positively impact the increase in the number of schools and colleges in the DIZ, in addition, the proposed project will also facilitate connectivity with local traffic and road facilities.

6.12 On the issue of an improvement in the availability of resources to people and an increase in value of private asset in the area.

Most of respondents were convinced that, due to the proposed project, the availability of resources in this area may improve and the value of private assets area may increase.

6.13 In general, any other opinion/observation about project were also raised and discussed during FGD.

It was duly conveyed that to maintain transparency in the project's process, they all hope that the concerned authorities will maintain transparency in the process related to the project. For the entire land to be acquired for the project, land should be acquired in the same manner. The rates of compensation should be fixed according to the nearest area. Provision of appropriate facilities as per the Act should also be made available for the landless, dependent, and poor people of the project affected area. Further, the following issues were raised by the PAPs during FGD:

I. It is difficult to predict the future of whether this project will have an impact on the safety of the community or not. At present, crime is low in the region, but they are apprehensive that crime may escalate after the completion of the project because of the infiltration of migrated laborer's and other unacquainted people.

ii. The respondents also had apprehensions that employment opportunities may not be allocated for the locals because they lack technical skills and have a low educational qualification, which may not meet the requirement of the jobs offered by the airport authority.

iii. Concern was also duly discussed related to the loss of cowsheds, the loss of firewood resources, pastureland of domestic animals, etc.

6.14 Mitigation Measures:

I. Provide additional compensation for the raised structures in DIZ and other rehabilitation measures along with fair compensation for land.

ii. Illegal collection of fees from the local and passerby should be monitored and restricted.

iii. An initiative to be taken up to address the community safety during the construction phase, especially where the families will be shifted for living purposes.

6.15 Overall Likely impact on the Community Well-being and Liveability

The PAPs were concerned about the likely impacts on community well-being and live ability and PAPs life will be affected. It is also responded that few of the PAF will be affected more by this land acquisition as they will be losing land in the large area as compared to the others. The project will upset the social and cultural life of the people because their lifestyle may change completely after the project. They are very skeptical about the loss of their native traditional village culture and joint family structure. They have responded that their livelihood is mainly based on

agriculture/animal husbandry, which provides the equal distribution of the income among the family members but after the loss of land, we would be forced to do some kind of business for their survival which would affect the joint family structure. Further, project may impact on the environment, they said that any kind of different constructions will change the topography of the area and the environment will be negatively affected. There will be noise, water, and air pollution because of the project.

6.16 Demands of the villagers during the group discussion:

Most of the farmers are ready to give their land for the construction of the proposed Balh International Airport, but in return they want the value of their land equal to the market value or 10 times the circle rate. Apart from this, conditions were given for the family members to get jobs according to their qualifications, land in exchange for land and to create employment by providing technical training to the younger generation of the affected families. Those whose houses are being affected by acquisition should be rehabilitated and resettled in rural areas of Balh tehsil as per rules.

6.17 Discussion on alternative location for the project:

During FGD, villagers have proposed alternative land for this project at Jahu in Mandi/Hamirpur district of Himachal Pradesh, which is about 40 km from Balh. It covers three districts (Mandi, Bilaspur and Hamirpur) and most of the land is barren and less fertile and has fewer people to be resettled and resettled by acquisition than in Balh.

Chapter-7

COST AND BENEFIT ANALYSIS

After careful analysis of the positive and negative impacts of construction of the new green field Airport Balh, Mandi, the SIA team compared the cost with its benefits. In the following section, a detailed analysis of benefits and respective costs are presented.

The specific costs of the project were made available; the exact cost-benefit analysis is not being carried out.

7.1 Assessment of Public Purpose:

The construction of the new green field Airport Balh, Mandi, will help in creating employment opportunities for the youth in the coming years and will also lead to better infrastructure, tourism growth & air connectivity. The project will prove fruitful for the PAFs and the surrounding areas in a long term. Also, the project is vital for a strategic infrastructure development in the coming future which signified its importance for national interest as well.

It can further be established that a public purpose will be certainly served by acquiring the private land and thereby, completing the construction of the project. If the project is completed, it will improve connectivity and provide smooth, fast, and safe commuting and transportation services to the commuters. If the project is delayed, it will lead to a rise in the overall cost of the project, affecting both the Government of Himachal Pradesh and as well its residents. If the project is stopped, it will lead to not only a loss in funds but also a waste of the entire manpower and resources spent on the project till now. Hence, the social costs and benefits of the proposed land acquisition have been assessed assuming that there will be no change in the location of the project or the quantum of land that will be acquired.

7.2 Impact on Structures and Magnitude

A significant no. of PAFs i.e., about 2498 PAFs will lose constructed structures being used for residential, commercial and community purposes from which they derive their livelihood and houses being used for residential purposes. From the outset, it seems a considerable impact and loss for the PAFs both for their livelihood and residential purpose.

7.3 Determinants of Compensation

As per sections 26 and 27 of RFCTLARR-2013, the collector shall adopt the following criteria to assess and determine the market value of land and amount of compensation. Market value specified in the Indian Stamp Act, 1899, for the registration of sale deeds or agreement to sell where land is situated, the average sale price of similar type of land situated in the nearest village or nearest vicinity.

During the interaction with the PAFs and PAPs, most of them are demanding an average compensation of Rs 1.5-2 crore per bigha. As per them, such rates have already been paid by other builders/buyers in the same area. The compensation should be made keeping in mind the provisions of the RFCTLARR-2015 of the HP Government.

7.4 Entitlement Matrix

The PAFs will be entitled to the following six types of compensation and assistance packages:

- Compensation for the loss of land, crops/ trees at their replacement cost.
- Compensation for structures (residential/ commercial) if any and other immovable assets at their replacement cost.
- Assistance in lieu of the loss of business/ wage income and income restoration assistance.
- Alternate housing or cash in lieu of house to physically displaced households not having any houses.
- Assistance for shifting and provision for the relocation site (if required), and
- Rebuilding and/ or restoration of community resources/facilities

As per sections 26 and 27 of RFCTLARR-2013, the collector shall adopt the following criteria to assess and determine the market value of land and amount of compensation. Market value specified in the Indian Stamp Act, 1899, for the registration of sale deeds or agreement to sell where land is situated.

- The average sale price of similar type of land situated in the nearest village or nearest vicinity,
- Consented amount of compensation as agreed upon under sub-section (2) of section 2 in case of acquisition of lands for private companies.

➤ R& R package as per RFCTLARR-2013

Below table shows the Entitlement Matrix according to the category of the impact and the eligibility of R&R as per RFCTLARR. The basic principles governing compensation structure are shown in the Table 60.

Table 60 Entitlement matrix and basic principles governing compensation structure.

S. No	Category of Impact	Eligibility for Entitlement	Relevant RTFCTLARR Act 2013	
1	Loss of Land	Title holder	Market value of land. This will be determined as per Section 26 of RFCTLARR Act 2013 by DC. Amount equivalent to current stamp duty and registration charges on Compensation amount for replacement of lost Assets.	Applicable as per RTFCTLARR Act2013. Most of the PAFs are demanding R&R.
		Affected family/person Land	Land for Land	Applicable as per RTFCTLARR Act2013.
2	Loss of other Assets	Title Holder	Effectuated Assets attached to land or building as depicted in annexure	This will be provided to affected families as per the RFCTLARR Act2013 (provision under First Schedule Sl.No.2 (ref. Section 29 of the said Act). This will be provided along with the loss of land and/or the structure which will be finalized by the Collector. Reevaluation is sought by PAFS.

3.	Demurrage	Title holder or the tenant	The compensation towards standing crops which may be on the land at the time of taking possession of land, need to be paid as per provisions u/s 28. RFCTLARR Act, 2013	
4	Loss of Land and other assets	Title Holder	Additional 12% on market value of land	Value of land, additional 12% per annum to be paid on such market value commencing on and from the date of publication of notification of SIA u/s (2) of section 4 in respect of land, till award or date of taking Possession of land Whichever is earlier.
	Solatium	Title holder	Solatium amount shall be in addition to the compensation and equivalent to 100% of the compensation amount (u/s 30 RFCTLARR Act, 2013)	
	Additional component	Title holder	In addition to the market value of the land, the authority shall, in every case award an amount calculated at the rate of 12% per annum on such market value for the period from SIA notification date u/s 4 till the date of the award or the date of taking possession of the land, whichever is earlier (u/s 30 (3) RFCTLARR Act, 2013).	

7.5 Costs and Benefits of The Project

Construction of new Airport Mandi will serve as an important catalyst for economic growth and other benefits. Some of the possible benefits are:

- The construction of the airport will increase the price of the land in the area which will be a direct benefit to the landowner in the project area.
- Improvement in transportation due to the accessibility of the airport will result in the growth of tourism in Mandi district. This will further benefit the forward linkage sectors of tourism like growth in local transportation, hotels and hospitality industry and local product markets.

- Paragliding, the emerging tourist sport in district has been considered potentially the best in India as it provides maximum continuous flying hours and safe and large landing space. The potential of increase in tourist footfall will help to boost the commercial success of the project.
- The airport will serve an important strategic purpose for the defense sector due to its proximity to China borders.

7.5.1 Costs

The costs due to construction of International Airport Balh, Mandi include economic, operational, and environmental costs.

(i) Economic and infrastructure costs include (a) costs involved in planning the project, (b) cost of land required for it, (c) cost of building, (d) cost of electrification and (e) cost of safety equipment. These entail heavy expenses, and these constitute economic costs.

(ii) Operating costs encompass (a) costs of energy and power, (b) labour costs, (c) cost of materials and (d) annual maintenance costs. Operating costs are also economic costs but will arise at a later stage.

(iii) External, environmental, and social costs of the project consist of (a) costs of air, water, and noise pollution, (b) costs attributed to contribution to global warming.

7.5.2 Benefits

The benefits that will accrue from the airport project on its completion and functioning include the following:

(i) Economic benefits. These include (a) increase in revenue, (b) increase in land value, (c) business opportunities, (d) livelihood options, (e) employment & income, and (f) strong market forces.

(ii) External or social benefits. These encompass (a) the ease of movement of people and goods, (b) saving in access time, waiting time and in-flight time, (c) reduction in pollution due to reduced road transport and use of sustainable and environment friendly technology in airways, (d) reliability improvement in transport by avoiding congestion and delays and (e) safety improvement which helps reduction in traffic accidents and lifesaving.

Investing in the airport project is a significant social decision. One of the major drawbacks of the expansion project is land acquisition and cost attached to it. However, the public decision makers should not only focus on the financial cost, but also the potential positive impacts accruing from

the spillovers on the society. The CBA shows that this project has a positive NPV which fully demonstrates that the project is worth implementing. Because of the ticket revenue, travel time savings and safety improvement considerations, the project will be cost-effective and worth having. The results of the cost, benefit and NPV comparison are summarized in Table 61.

Table 61 Cost - benefit comparison

Total Costs		Total Benefits	
Economic & Infrastructure cost	Planning Land Building Electrification Safety Equipment	Economic Benefits	Passenger and freight revenue Low-cost transport Increase in land value. Business opportunities Livelihood options Employment & Income Strong market forces
Operating cost	Energy Labour Materials Annual Maintenance	Social Benefits	Developed transport. Access to new locations Saving in travel time Reliability of transport Improvement in safety Saving in Road Infrastructure
External & Environmental cost	Accident & casualties Pollution & Warming Barrier effects Cultural invasion	Cultural Benefits	Promotion of Business Culture Consumption of Comforts & Luxuries
Present value of total cost (Co)		Present value of total benefit (Bo)	

7.6 Problems in applying Cost-Benefit Analysis

Cost-benefit analysis is a useful tool in decision making in respect of a project. But the correctness and reliability of CBA is conditioned by the accuracy of estimation of costs and benefits. In a CBA, both the costs and benefits have monetary and non-monetary elements and

have reference to directly impacted and indirectly impacted stakeholders. Social benefits also relate to posterity and non-human stakeholders. The economic valuation of all costs and benefits of a project is therefore not possible. In many cases, values must be imputed, and guess works must be made. Therefore, CBA is a highly complex and very challenging exercise, and the valuation is more likely to be inaccurate.

such view of the matter, no attempt has been made to estimate costs and benefits of the construction of International Airport Balh, Mandi project. But by intuitive logic it is expected that the benefits from the project will far outweigh its costs and hence the project is worth the time, money, and effort to be directed at it and would make a worthwhile contribution to the development of airport and the economy at large.

Chapter-8

Social Impact Management Plan

The compensation for the PAF of the six project affected villages is proposed to be determined based on the IPC Rules, 2015. Due care will be taken to compensate each affected family as per the loss related to acquired land, structure, movable/immovable property etc. The Act ensures that the PAF should be given fair compensation and all their related concerns should be taken care of. The SIA team tried to reconcile the concerns raised by PAF with the provisions of the Act during the survey and group discussions. The identified proposed measures for the welfare of the project affected people as per the PWD Rules, 2015 are as follows: -

1. Social impact assessment should be done before the land acquisition process.
2. More monetary benefits before acquisition process and list of displaced family, land ownership and infrastructure, commercial structure, list of landless people in affected area, list of PAPs belonging to SC/ST, handicapped list in affected area List of landless agricultural laborers in the affected area, list of movable/immovable property in the affected area should be prepared.
3. The operation of the project should be carried out in compliance with all applicable laws, policies, measures taken to minimize damages such as appropriate compensation or development of sources of livelihood and resources, national and state legislations.
4. As far as possible efforts should be made to create proper resources to avoid social side effects in the operation of the project. Where this is not possible, the duration, intensity and spread of the social impact/repercussion should be minimized. Also, efforts should be made to restore those impacts which cannot be fully mitigated (for example, agricultural land, sources of livelihood, quality of life of individuals, etc.).
5. The priority of the project should be in accordance with the welfare and livelihood of the affected persons and families while determining suitable construction method schedule and other measures to minimize the damage.

6. The construction and operation of the airport may be directly related to the social impact or there may be an impact on the natural environment and the local economy in the form of execution of project activities etc. While assessing all such direct and indirect impacts accurately and transparently, there is a need to adopt mitigation measures to reduce them.

7. In the project, special attention needs to be given to weak/vulnerable persons and families, such as landless and tenant farmers who depend on agricultural labor for their livelihood. Such persons and families should be able to take decisions, consult and unable to participate in the discussions. Along with this, they remain ignorant about new means of livelihood and work opportunities under the project. Those affected who do not have proper land ownership or land registration should also get proper compensation, although they have been living in the affected area for many years.

8. The legal rights and interests of all those individuals, groups and communities who are affected by the project should be taken care of in the project. In this way, all those whose land, crop and other assets are in the layout of the airport and such other persons whose comfort, standard of living and other security cover etc. have been affected are to be included in it.

9. Individuals, groups, and communities in the project as stakeholders of the project shall have the right to express their rationality, interests and views in the subjects related to the project. The right to dissent of the affected people should be ensured and duly considered.

10. R&R package including livelihood plan, gender plan, education plan etc. should be mandatory and time bound for the people affected by the acquisition.

11. Timeline of payment to be fixed or paid before rehabilitation and resettlement No one should be displaced before rehabilitation and resettlement plan.

12. All displaced PAFs should be given at least three prior notices, and a reasonable time of 9-12 months should be given for smooth rehabilitation and resettlement in the new area of their choice with utmost care for their livestock.

13. There should be proper compensation for social impacts due to displacement/rehabilitation, economic, psychological, ecological, mental inclusiveness.

14.. Transparency and participatory approach should be followed for the acquisition and subsequent rehabilitation process.

15. Utmost care should be taken to prevent misuse of land.

16. There should be an option of lease for the landless people.

17. Institutional Mechanism- National/State Monitoring Authority/Commissioner R&R/Administrator should be set up for settlement of disputes.

The impacts resulting from acquisition of land and assets and operation of the project, and their mitigation measures are presented in the following form.

S. No.	Effect/ combat	Category and type of impact	Preventive measures
1-	Fertile of land Damage	High serious and long term	<p>1. The acquisition of land should be done based on 'Technical Feasibility Report' to make it clear that acquisition of land for the airport is the last option and the proposed land is technically the best.</p> <p>2. The persons authorized and eligible for compensation of land (eligibility for compensation, amount of compensation, time for providing compensation, method of raising objection regarding compensation, etc.) should be clearly defined and informed to the affected landowners.</p> <p>3. A framework should be developed for compensation which should be value based and not just compensation for the affected property.</p> <p>4. All rehabilitation measures should be completed before starting the construction. Since there is a provision to give compensation for the acquired land under the land acquisition scheme. Therefore, efforts should be made to pay the compensation to the affected landowners on time.</p> <p>5. It should be ensured that no middleman plays a role in the payment of compensation.</p>

			<p>6. Determination of the value of all the assets located in the land to be acquired such as tube wells/boring/pumpsets, shops, buildings, trees, plants etc. before the determination of the amount of compensation, and to ensure that adequate compensation is paid by the concerned departments. Needed A complete list of such assets should be prepared. If the amount of compensation for the above assets, for example trees and plants, seems less, then the affected farmer should be allowed to sell it in the open market. In this situation, the work of getting permission from the concerned department (e.g., Forest Department) should also be ensured.</p> <p>7. Despite the acquisition of 100 percent agricultural land of the affected village, that small land which is not directly affected in the construction of the airport, but has become unusable due to the construction work, should also be included in the determination of compensation. For example, a small piece of land of a farmer which may be only a few meters long or wide. Even if it is not acquired, it will be of no use to that farmer. It has been revealed in the social impact study that misconceptions have spread among the farmers regarding such issues. Therefore, in this regard, the land to be acquired by the district administration should be displayed after physical verification so that the farmers can get the real information about the directly affected land.</p> <p>8. In addition to monetary compensation, some land should be made available to the affected farmers from the land of the village society so that it can be used for alternative employment or for making cattle shed etc.</p>
2-	Loss of livelihood and possibility of migration	High severity short term	1. Priority should be given to such landowners whose land has been affected by the project by more than 70 percent.

			<p>2. Employment should be given priority to the residents in the construction of the airport.</p> <p>3. Technical training should be given to the members of the affected families if required.</p> <p>4. If possible, priority and exemption should be given in free boring and electricity connection in the newly purchased land.</p>
3-	<p>Impact on community values and lifestyle due to workers during construction period and non-locals and outsiders during long term operation. The presence of project workers and their actions during the construction period of the project is an important factor affecting the socio-economic environment, which can also affect the local community. Individuals in communities</p>	<p>Low intensity and long term</p>	<p>1. In the event of any kind of dispute during the construction period, there should be a complaint register/register or help line and phone number for the residents.</p> <p>2. Timely redressal of all types of complaints should be ensured.</p> <p>3. In case of huge conflict/dispute, meetings should be held at the village level, due to the presence of many external activists in the villages, gender criminal incidents and complaints may come.</p> <p>4. The contractors should make a code of conduct or clear rules for their employees regarding their conduct. It should be clearly mentioned in this manual that on what topics and to what extent the employees can talk to the residents.</p>

	<p>have an impact. Apart from this, the use of limited locally available facilities by the project workers is also likely to affect the lifestyle of the local people.</p>		
--	--	--	--

8.1 Measures to Avoid, Mitigate and Compensate Impacts:

To avoid any adverse impact of the proposed Mandi International Greenfield Airport, the best possible technical design has been proposed and efforts have been made to acquire the least possible land with minimum disturbance to the settlement. Also, appropriate measures have been planned during the construction phase as well so that the residents are not disturbed. For compensating the land and its associated impact, a comprehensive T&T plan will be prepared based on the T&T Act, 2013 and T&T Rules, 2015.

Measures that the Requiring Body has said it will introduce in the Project Proposal

The Project Implementing Agency is suggested to do the following to ensure the implementation of the IPC Rules 2015:

- Grievance Redressal Mechanism needs to be developed: A committee headed by a senior officer should be constituted for timely disposal of grievances related to land acquisition and R&R settlement. It should be present from the beginning to the end of the project.
- Monitoring of the quality of RAP (Rehabilitation Action Plan) should be done by the Authority on regular basis under the supervision of a senior designated officer and preferably once in every three months by an external agency on regular basis.
- The R&R should be evaluated by an external agency and the suggestion, if necessary, should be used for further action. The R&P (Rehabilitation Action Plan) should be evaluated midway through the plan and at an end period.

Additional measures that the required body has said that this app. in response to the findings of the process.

Apart from complying with the essential provisions of the Act, the project executing agency should endeavor to accommodate maximum or all the project affected people for the jobs created on and around the project. The agency should endeavor to provide suitable employment opportunities to PAFs based on individual skill and education.

8.2 Impact and Management Plan

This section describes the various impacts that the proposed project will have on the lives of PAPs, and presents the following management plan to mitigate those impacts:

- The first and foremost impact on project affected families is the permanent acquisition of their agricultural land. The Management Plan to this effect should provide them compensation as per the PWD Rules, 2015 and equivalent to the compensation for the acquired National Highway of Balh Tehsils.
- There are also some people who are dependent on agricultural land for their livelihood and with the acquisition of land, they will lose the livelihood opportunity. Since the entire land of all the villages is cultivable, there would be a complete loss of agricultural produce on the land used for cultivation. For such families, training should be given for the employment of new technology.

8.3 Gender (for male and female) scheme Rs.

About 70% of the landowners in the PAF of the affected villages (Jarlu, Tawan, Dhaban, Syanh, Kummi and Chatru) are men, while the proportion of women is only about 30%. While males constitute 50.03% of the PAPs, females constitute 49.97% of the PAPs. The literacy level of women is also lower than that of men.

Whereas women in the project-affected area mostly work in farming on their families' land, or in ancillary activities such as animal husbandry, and mainly as housewives. They are not earning in a formal or informal manner, therefore, the income generated by them is not reflected in the survey responses as they are not seen as earning members in their households. The majority of the

recorded earning members are males, with only about 5% females employed in government/private services.

The socio-economic profile of PAF reveals that there is a significant gender gap in literacy, workforce participation and recognition of women, and their access to asset ownership. Low awareness levels coupled with insignificant roles in financial decision-making at the household and community level prevent women from having equal access to the benefits generated by the project. Most likely the amount of compensation will be controlled by the men which they may misuse due to low literacy level and existing bad habits like drinking alcohol instead of saving or investing for long term gains. In such a situation, women may have to bear the additional burden of running a household on limited income and resources. Therefore, it is important to assess the status of project affected women and prepare a management plan accordingly.

8.3.1 Management Plan for Women:

As found out from the survey, women in the village are not well educated and are mainly housewives leaving about 5% women in jobs. The potential impact of the proposed project on women could be the loss of long-term security attached to immovable assets in the form of land. The management plan should focus on empowering project affected women to strengthen them with financial stability. There is a need to provide employment opportunities to them to uplift their present status. However, strict monitoring of safety and security is required where women will be employed through the project. The following systematic measures can be taken to make women also equal beneficiaries of the management plan:

1. The implementing agency should take active initiative so that women are properly consulted and invited to participate in group-based activities to gain access to resources.
2. There is a need to increase and promote the participation of women in economic activities.
3. A systematic and structured plan for imparting necessary skills to the women of PAF needs to be devised by the concerned government agencies to enhance their employability.

8.3.1 Management Plan for Women:

As found out from the survey, women in the village are not well educated and are mainly housewives leaving about 5% women in jobs. The potential impact of the proposed project on

women could be the loss of long-term security attached to immovable assets in the form of land. The management plan should focus on empowering project affected women to strengthen them with financial stability. There is a need to provide employment opportunities to them to uplift their present status. However, strict monitoring of safety and security is required where women will be employed through the project. The following systematic measures can be taken to make women also equal beneficiaries of the management plan:

1. The implementing agency should take active initiative so that women are properly consulted and invited to participate in group-based activities to gain access to resources.
2. There is a need to increase and promote the participation of women in economic activities.
3. A systematic and structured plan for imparting necessary skills to the women of PAF needs to be devised by the concerned government agencies to enhance their employability.

8.3.3 Provision of women in construction camps:

- **Temporary accommodation** - Suitable accommodation should be made available at the labor camp site during the construction work for the workers / families of the workers. The size of the room should be as per the standard (4m^{0,2}/person). In case of non-availability of standard, its design should be prepared by the contractor. The design should be duly approved by the Construction Supervising Consultant. Rooms for such families should be constructed as per the approved design.
- **Health Center** - Health problems of workers will be taken care of by providing basic health facilities through health centers set up temporarily for the construction camp. The health center should have at least one visiting doctor to deal with first aid requirements or minor accident cases, linkage with the nearest hospital to refer patients with major ailments and serious cases. The health center should have MCW (Mother and Child Welfare) units for the treatment of mothers and children in the camp. In addition, the health center will provide necessary routine vaccinations for children.
- **Shishu Griha facilities** - It is expected that women workers will have mothers with infants and young children at the construction site. The provision of crèche can solve the problems of women who can leave their children in crèches and work in construction activities for the day.

- **Scheduling of construction works** - Due to the rapid construction work demands, it is expected that a 24-hour work schedule will be in operation. Women should be exempted from night shift. Strict security should be provided at the construction site to reduce sexual harassment.
- **Education facilities** – Construction workers are largely a mobile group. They move from one place to another taking their families with them. So, there is a need to educate their children at their place of work. Day creche facilities should be expanded along with primary educational facilities.

8.4 Training Need Assessment:

In the Social Impact Management Plan, a strategy must be made for the economic sustenance of the PAP. They need to be trained to help them improve their production levels by providing them with new skills or to upgrade their existing skills through training. Since PAFs are mostly dependent on agriculture for their primary livelihood, training is a very important component for their income restoration. For PAFs who wish to diversify their economic activities, they need to identify different training needs suitable to engage in income generation according to their preferences. In addition to training programs aimed at imparting skills, general entrepreneurship development also needs to be assessed and such development programs should also be a part of the training program aimed at improving the managerial capabilities of the PAPs. In addition, there is a need to provide capacity building support for improving women's access to certain skills such as tailoring and weaving, small well shops, marketing-buying and selling local produce etc., which can serve as a supplementary source of income for women. Vocational training can also be given to women and children affected by the project. These training programs will be provided through existing government schemes specifically designed for the development and welfare of the women community and supplementary funds may be transferred from the project to facilitate setting up of training related activities. There are many government schemes and NGOs that can be approached and used for this purpose, such as:

- a. Self Help Groups,
- b. Support for women and child development,
- c. Women empowerment programs etc. in various villages.

8.5 Strategy for Livelihood Operations and Income Generation Through Skill development:

The project is expected to provide income generation opportunities through skill development training and linkages with ongoing government schemes at the tehsil level. The executing agency will play an active role in mobilizing various government schemes for the benefit of the PAPs. The executing agency will work with the concerned department of PAF and Tehsil to give maximum benefit of the training programmes.

A very important aspect of income generation activities involves skill mapping of PAFs whose livelihoods are directly affected due to land acquisition. The skill development options linked to the resource base of the area and availability of the market will be discussed with the PAFs to ascertain their preferences in selecting certain skill development training. PAFs need to be encouraged to participate in the development of viable long-term income-generating schemes rather than short-term arrangements. Such schemes should be identified by the implementing agency in consultation with project affected families, district administration and other stakeholders in institutional financing and marketing associations to prepare viable sustainable proposals for the project affected families.

Efforts should also be made to utilize the existing skills along with the requirement of the work during the construction phase of the project. The project should also facilitate on-the-job training in consultation with the contractor, in case PAFs do not have the necessary skills to meet the dire need of the job.

In addition, during the implementation of the project, project affected families may be provided job opportunities through skill development training. PAFs can also get involved in allied agriculture activities like dairy, poultry, animal husbandry etc. which will also take care of the existing livestock of PAFs. The project should also focus on helping PAFs in providing quality education opportunities with the help of various organizations.

The Social Impact Management Plan should ensure a career mapping exercise to ascertain the type of skills required in the sector of PAF for the jobs created by it. For this purpose, a comprehensive survey should be conducted to identify those people who want to participate in livelihood and skill development training and thus categorize their areas of interest to find suitable courses and classes. The agency may also identify suitable training institutes, classes and organizations around the project affected area as an extended support to the PAF.

9.Measures by Requiring Body as per HP Rules 2015

This SIA report will be beneficial for the requiring body to undertake land acquisition process and to prepare a Plan of Action according to the aspiration conveyed by the project affected families and other stakeholders during public consultations and surveys. In the light of the findings of the study, the following steps may be taken for mitigation of expected social impacts.

A Complete R&R policy and plan shall be developed as per Govt of India, Govt of HP Rules 2015, Land acquisition act 2013 for Rehabilitation and Resettlement of the PAFs becoming landless and houseless as per law as well as considering displacement of the PAFs repeatedly and in some cases is fourth time for this railway project as shared by the villagers.

9.1 Institutional Arrangement for implementation of Rehabilitation and Resettlement Plan

As per the act 2013, where land proposed to be acquired is equal to or more than 100 acres, the government shall constitute a “Rehabilitation and Resettlement Committee” under the chairmanship of the Collector. This committee would aim to review the progress of implementation of Rehabilitation and Resettlement Schemes or plan and to carry out the post-implementation Social Audit in consultation with the Gram Sabha. The members to be involved in the process of implementation and social audit, thereafter, may be as follows:

1. A representative of women residing in the affected area.
2. A Representative of SC population residing in the affected area.
3. A Representative of a voluntary organization (NGO) working in the area.
4. The Land Acquisition Officer of the Project.
5. The Chairperson of the Panchayat/s of the affected area or their nominee/s.
6. Member of Parliament and Member of Legislative assembly of the concerned area or their nominee. (GP Pradhan)
7. A Representative of Requiring Body.
8. Administrator for R&R as the Convener.

9.2 Grievance Redressal Committee (GRC)

Efficient grievance redressal mechanism shall be developed as soon as possible to assist the PAFs to resolve their queries and complaints on urgent basis. Grievances of PAFs shall be first brought

into the attention of field level functionaries of the project. Grievances not redressed by then will be brought to the Grievance Redressal Committee (GRC). The composition of the proposed GRC may be the same as R&R Committee. This Committee may meet on the monthly basis, or the case may be defined by the state Government.

The main responsibilities of the GRC may be:

- Provide support to PAFs on problems arising from land / property acquisition.
- Record PAFs grievances, categorize and prioritize grievances and resolve them; and,
- Report to PAFs on developments regarding their grievances and decisions of the GRC.

Other than disputes relating to ownership rights under the court of law, GRC will review grievances involving all resettlement benefits, compensation, relocation, replacement cost and other assistance. When any grievance is brought to the field level functionaries, it should be resolved within 15 days from the date of complaint. The GRC will meet every month (if grievances are brought to the Committee), determine the merit of each grievance, and resolve grievances within a month of receiving the complaint — failing which, the grievance will be referred to appropriate Court of Law for redress. Records will be kept of all grievances received including: contact details of complaint, date of the complaint, nature of grievance, corrective actions taken and the date these were effected, and final outcome. A flow chart of grievance redressal mechanism is indicated in Figure 9.3 below:

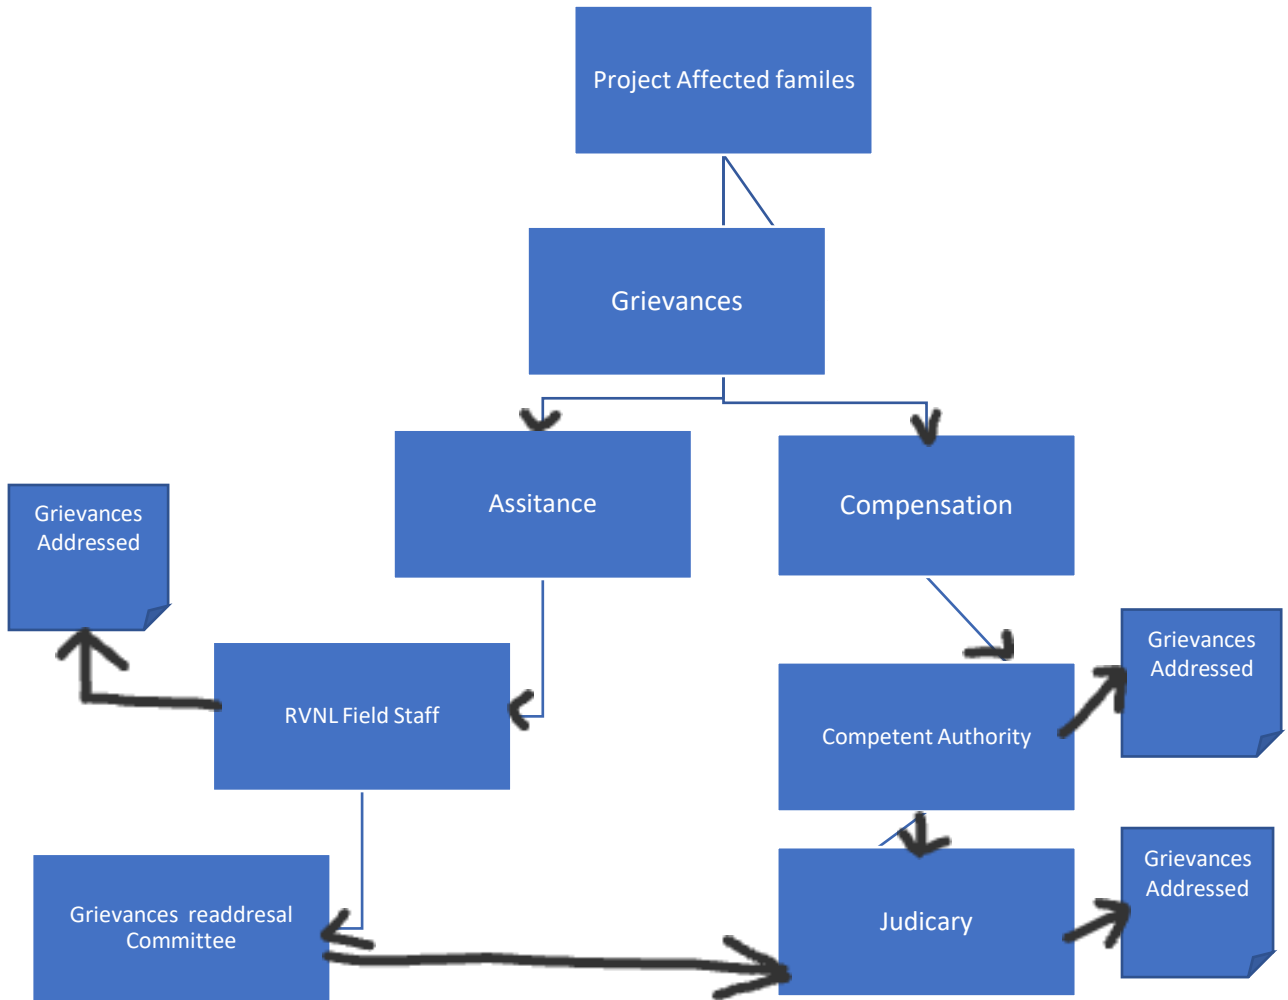

Figure-9.2: Stages of Grievance Redressal

9.3 Monitoring and Evaluation

Monitoring and Evaluation of the SIMP implementation is necessary as activities are to be executed by many agencies in a time bound manner. Monitoring involves periodic checking to ascertain whether activities are progressing as per the schedule whereas Evaluation is to assess the performance of the SIMP. For this purpose, a Monitoring and Evaluation plan needs to be developed to provide feedback to the project authorities. Monitoring and Evaluation of R&R gives an opportunity to reflect on the success of the R&R objectives, strategies, and approaches and to assess the efficiency and efficacy in implementation of R&R activities, their impact and sustainability. Monitoring will give particular attention to the project affected vulnerable families

and groups such as Scheduled Castes, Scheduled Tribes, BPL families, Minorities, women headed households, widows, old aged and the physically or mentally challenged persons. An independent evaluation through third party is also necessary for mid and end.

9.4 Internal Monitoring

The internal monitoring for SIMP implementation will be carried out by the project authorities where main objectives will be to report progress against the SIMP schedule; check that agreed entitlements are delivered in full to affected families and people; identify any problems, issues or hardship resulting from the SIMP implementation and to take corrective actions; monitor the effectiveness of the grievance system and measure the satisfaction of PAFs. Internal monitoring will focus on measuring progress against the schedule of actions defined in the SIMP. Activities to be undertaken by the project authorities will include liaison with the Land Acquisition team, construction agencies and project affected communities to review and report progress; verification of land acquisition compensation delivery against entitlements in accordance with the SIMP; verification of implementation of agreed measures to restore income and living standards of PAFs; identification of any problems, issues, or hardship resulting from resettlement process; assess project affected families and peoples' satisfaction with resettlement outcomes; and redress grievances of PAFs to follow up that appropriate corrective actions. Field level officers of RVNL, in charge of SIMP implementation will track the R&R progress. For this purpose, the indicators suggested are as given in Table-60.

Table 54 Indicators for monitoring of SIMP progress

Physical	Extent of land acquired, number of structures dismantled, number of families affected, number of families purchasing land and extent of land purchased, number of PAFs receiving assistance/compensation, number of PAFs provided transport facilities/ shifting allowance, extent of government land identified for house sites, number of land users and private structure owners paid compensation
Financial	Amount of compensation paid for land/structure, cash grant for shifting, amount paid for training and capacity building of PAFs.
Social	PAFs knowledge about their entitlements, communal harmony, morbidity, and mortality rate, taking care of vulnerable population etc.

Economic	Number of Jobs provided to the entitled families, number of businesses reestablished, utilization of compensation, house sites/business sites purchased successful implementation of Income Restoration Schemes implemented
Grievance	Number of community level meeting, number of grievance redressal meetings held, number of cases disposed by Project authorities to the satisfaction of PAFs, number of grievances referred and addressed by the concerned Authorities

9.5 Independent Evaluation

An Independent Evaluation Agency may be hired by the Project for mid and end term evaluation to achieve the following: (a) verify results of internal monitoring; (b) assess whether resettlement objectives have been met, specifically, whether livelihoods and living standards have been restored; (c) assess resettlement efficiency, effectiveness, impact and sustainability; (d) ascertain whether the resettlement entitlements were appropriate to meeting the objectives and (e) this comparison of living standards will be in relation to the baseline information available. The following table 61 should be considered as the basis for indicators in external evaluation of the SIMP.

Table 55 Indicators for Project Outcome Evaluation

S. No.	Objectives	Risks	Outcomes
1	The negative impact on the persons affected by the project. will be minimized	Resettlement plan implementation may take longer time than anticipated	Satisfaction of the landowners with the compensation and assistance paid. Type of use of compensation and assistance by the landowners Satisfaction of structure owners with compensation and assistance Type of use of compensation and assistance by the structure owners
2	Persons and families losing assets to the project shall be compensated as per the Act and Rules	Institutional arrangement may not function as efficiently as expected	Percentage of PAFs adopted the skills acquired through training as only economic activity. Percentage of PAFs adopted the skills acquired through training as secondary economic activity
3	Affected persons and families will be assisted in improving or regaining their standard of living	Authorities implementing SIMP may not perform the task as efficiently as expected	Percentage of PAFs reported increase in income due to training. Percentage of PAFs got trained in the skill of their choice. Role of project authorities in helping PAFs in selecting trade for skill improvement Use of productive assets provided to PAFs under onetime economic rehabilitation grant
4	Vulnerable groups will be identified and assisted in improving their standard of living	Unexpected number of grievances may arise PAFs falling below their existing standard of living	Type of use of additional assistance money by vulnerable group Types of grievances received. Number of grievances forwarded to Grievance Redressal Committee (GRC) and the time taken to solve them. Percentage of PAFs aware about the GRC mechanism

			Percentage of PAFs aware about the entitlement framework Opinions of PAFs about the approach and accessibility of the project authorities
--	--	--	--

This has been confirmed from the available official records, media reports and information provided by the railway officials. Prior to this attempt was made to acquire the land through negotiation. These negotiations failed and as a result, compulsory land acquisition procedure was begun, which was announced in July 2021 under sector -4 of the LARR Act 2013.

This indicates that land acquisition was to be done under the constitutional provisions of the amended new Land Acquisition Act, popularly known as “The Right to Fair Compensation and Transparency in Land Acquisition, Rehabilitation and Resettlement Act, 2013”. This Act puts forth the provision of conducting Social Impact Assessment (SIA) of the development and displacement because of any developmental project. The underlying basis of SIA includes taking public consultation before acquiring land, if the project involves building roads, railway lines and government institutes and which are for public purpose.

To safeguard the interests of the community, RFCTLARR Act, 2013 ensured that the ambit is widened in its realm of Constitutional provisions and includes the market price of the land acquired. The process of the current acquisition of land is being carried out under the Constitutional provisions of the Land Acquisition Act 2013, HP Rules 2015 in a total of 7 villages.

Chapter-9

Recommendations

The present SIA study was conducted with a holistic approach highlighting the positive and negative impacts of the proposed Mandi International Greenfield Airport. The study reveals some of the concerns and issues raised by the stakeholders. These concerns and issues have been discussed in detail in the previous chapters. The concerns and issues should be considered by the concerned authorities while implementing the mitigation plan of the project. The SIA team has collected data from the field through interaction with PAF, observation and other technical methods and has proposed some recommendations from observation of these concerns, which are as follows:

1. The resettlement and rehabilitation plan (R&R Plan) ensuring the displacement of project affected families may be made before any step for land acquisition are taken.
2. The compensation amount for land acquisition should be four times the market value of the land/circle rate (as applicable) in rural areas and two times the market value of the land in urban areas as per the first schedule of the RPST Act, 2013.
3. Assets located in the acquired land such as building, shop, tube well/boring, trees, plants, crops, water source etc. should be compensated by proper valuation from the competent organization or through negotiation with the affected families.
4. Affected families will partially lose agricultural land, resulting in loss of crop productivity.
5. Generally all farmers are ready to give land. If their problems are redressed according to them or according to the PWD Act, 2013.
6. Whose business will be destroyed by acquisition. They should be rehabilitated and rehabilitated as per the Land Act 2013, and they should get enough money every month to earn their livelihood until their business becomes operational.
7. The affected landowners should be compensated as per the Social Impact Management Plan (SIMP) described in this study and the provisions of the RFCTLARR Act, 2013.

8. The families whose land and houses will be destroyed in the acquisition. Such families should be rehabilitated and rehabilitated before acquisition as per rules within a radius of about 15 kms.

9. Community, social and government properties which are affected by the acquisition and will affect the villagers partially or completely. After assessing those assets, rehabilitation and resettlement should be done as per the rules before the project work starts.

10. The findings of the study also reveal that the proposed project will affect the livelihood and socio-economic status of the affected families.

11. The details of village-wise problems and the measures given for their solution are mentioned in Appendix-I. The redressal of which should be timely so that social harmony remains in the villages.

Although there are some constructions related concerns which need to be carefully managed through mitigation measures prescribed in the SIA documents. It is generally anticipated that the construction and operation of the project will bring short-term and long-term benefits to all villagers. These are particularly relevant in relation to employment, the provision of goods and services, and community investment that will provide long-term benefits to villagers, thereby helping to mitigate short-term negative impacts. The project is also important from strategic point of view as it is close to the border of China. The benefits from the project are expected to be much more than the cost price. In this way, acquisition of land is in the interest of public and land acquisition can be done in a following mitigation measures in this report.

Annexure-I**Village-wise assets to be acquired, possible problems/losses and suggestions to solve these problems.****Tehsil: -Balh****1.Village Name: - Dhaban**
